MATHEMATICS **Max Marks: 60**

SECTION – I
(SINGLE CORRECT ANSWER TYPE)

This section contains **FOUR (04)** questions.

- Each question has **FOUR** options (A), (B), (C) and (D). **ONLY ONE** of these four options is the correct answer.
- For each question, choose the option corresponding to the correct answer.
- Answer to each question will be evaluated according to the following marking scheme:

Full Marks : +3 If **ONLY** the correct option is chosen;
Zero Marks : 0 If none of the options is chosen (i.e. the question is unanswered);
Negative Marks : −1 In all other cases

1. Suppose a is a real number such that the equation

$$a\cdot(\sin x+\sin(2x))=\sin(3x)$$

has more than one solution in the interval $(0,\pi)$. Number of integral values of 'a' satisfying the given condition is

A) 0 **B)** 1 **C)** 2 D) 3

2. Two tangents, one from the point A(2, 1) and other from the point B(-2, 1) are drawn to the hyperbola $\frac{x^2}{4}-\frac{y^2}{1}=1$. A circle which touches these two tangents and two asymptotes to the hyperbola has its centre at (a,λ) where $\lambda>0$.

The least area of the pentagon in which the above circle is inscribed (two sides of the pentagon are asymptotes of the hyperbola and two sides are the here tangents), is

A) $(3+\sqrt{5})$sq. units **B)** $(3+2\sqrt{5})$sq. units

C) $(6+2\sqrt{5})$sq. units **D)** $(6+4\sqrt{5})$sq. units

3. Let $k=\int_0^2 x^2(x^2+2)^{\frac{1}{5}}\,dx$ then, which of the following is true

A) $[k]=2$ (where [ ] denotes Greatest integer function)

B) $3<k<4$

C) k is a prime number

D) None of the above

NEET 2023 RANK 1 BORA VARUN CHAKRAVARTHI
For More Join: @IITJEE_Advanced

4. If $S = {}^{10}C_0\,{}^{20}C_{10} - {}^{10}C_1\,{}^{18}C_{10} + {}^{10}C_2\,{}^{16}C_{10} - {}^{10}C_3\,{}^{14}C_{10} + {}^{10}C_4\,{}^{12}C_{10} - {}^{10}C_5\,{}^{10}C_{10}$ then find the correct statement

A) Number of divisors of S is 10 **B)** Sum of digits of S is 6

C) S is a four digit number **D)** None of the above

SECTION – II
(ONE OR MORE CORRECT ANSWER TYPE)

This section contains **THERE (03)** questions.

- Each question has **FOUR** options (A), (B), (C) and (D). **ONE OR MORE THAN ONE** of these four option(s) is(are) correct answer(s).
- For each question, choose the option(s) corresponding to (all) the correct answer(s).
- Answer to each question will be evaluated according to the following marking scheme :

Full Marks :+4 **ONLY** if (all) the correct option(s) is(are) chosen;
Partial Marks: +3 If all the four options are correct but **ONLY** three options are chosen;
Partial Marks: +2 If three or more options are correct but **ONLY** two options are chosen, both of which are correct ;
Partial Marks: +1 If two or more options are correct but **ONLY** two options are chosen, and it is a correct option ;
Zero Marks : 0 If none of the options is chosen (i.e. the question is unanswered);
Negative Marks : –2 In all other cases.
For example, in a question, if (A), (B) and (D) are the ONLY three options corresponding to correct answers, then choosing ONLY (A), (B) and (D) will get +4 marks; choosing ONLY (A) and (B) will get +2 marks; choosing ONLY (A) and (D) will get +2 marks; choosing ONLY (B) and (D) will get +2 marks; choosing ONLY (A) will get +1 mark; choosing ONLY (B) will get +1 mark; choosing ONLY (D) will get +1 mark; choosing no option (i.e. the question is unanswered) will get 0 marks; and choosing any other combination of options will get -2 marks.

5. Let $f : R \to R$ be a function such that $f(x^5 + x - 2) = x^3 - 1, \forall x \in R$ and g be the inverse function of f.

If $p = \dfrac{d}{dx}\left(\left(x^3+1\right) \times g\left(f^3\left(g\left(f\left(g(x)\right)\right)\right)\right)\right)_{\text{at } x=7^{1/3}}$,

$$q = \frac{d^2}{dx^2}\left(\frac{f\left(f\left(g\left(g\left(f(x)\right)\right)\right)\right)}{x^2}\right)_{\text{at } x=-2}$$

and $N = \left(p\left(7^{-\frac{2}{3}}\right) + 8q\right)$, then (here $f^n(x) = (f(x))^n$)

A) Sum of the digits of N is 12

B) N is divisible by 5

C) Number of positive divisors of N is 4

D) N contains three distinct digits

6. Two functions $f(x)$ and $g(x)$ are defined as $f(x)=\begin{cases}[x]^{\{x\}} & ,x\neq 0\\ 0 & ,x=0\end{cases}$ and $g(x)=\begin{cases}\{x\}^{[x]} & ,x\neq 0\\ 0 & ,x=0\end{cases}$, (where $[\cdot]$ and $\{\cdot\}$ refer to the greatest integer function and the fractional part function respectively). Then which of the following statements is/are true (where $n\in N$)

A) $\int_0^{n+1} f(x)\,dx-\int_0^{n} f(x)\,dx=\frac{n-1}{\ln n}$

B) $\int_0^{n+1} g(x)\,dx-\int_0^{n} g(x)\,dx=\frac{1}{n+1}$

C) $\int_0^{t} f(x)\,dx=\int_0^{t} g(x)\,dx$ has at least one solution in $t\in\left(0,\frac{\pi}{2}\right)$

D) $e<\lim_{n\to\infty}\int_0^{n} g(x)\,dx<e^2$

7. Let α be the region in the plane $x+y+z=1$ with $x,y,z\geq 0$. β is set of points (a, b, c) in α such that only two of the three inequalities : $a\leqslant\frac{1}{2}$, $b\leqslant\frac{1}{3}$, $c\leqslant\frac{1}{6}$ hold simultaneously. If area of region R is denoted by $A(R)$, then

A) $A(\alpha)=\frac{\sqrt{3}}{4}$ **B)** $A(\alpha)=\frac{\sqrt{3}}{2}$ **C)** $A(\beta)=\frac{7\sqrt{3}}{36}$ **D)** $A(\beta)=\frac{11\sqrt{3}}{36}$

SECTION-III
(NUMERICAL VALUE)

This section contains **SIX (06)** questions.

- The answer to each question is a NUMERICAL VALUE.
- For each question, enter the correct integer corresponding to the answer using the mouse and the onscreen virtual numeric keypad in the place designated to enter the answer.
- Answer to each question will be evaluated according to the following marking scheme

Full Marks : +4 If ONLY the correct integer is entered; Zero Marks : 0 In all other cases.

8. Find the number of ordered pairs of positive integers (a,b) such that $a+b=1000$ and neither a nor b has a zero digit.

9. The value of

$$\sum_{r=1}^{\infty}\frac{r^3+(r^2+1)^2}{(r^4+r^2+1)(r^2+r)}$$ is:

10. Suppose z is a complex number with positive imaginary part, with real part greater than 1, and with $|z|=2$. In the complex plane, the four points $0, z, z^2$, and z^3 are the vertices of a quadrilateral with area 15. What is the imaginary part of z?

11. The graph of $y=f(x)$, where $f(x)$ is a polynomial of degree 3, contains points $A(2,4), B(3,9)$, and $C(4,16)$. Lines AB, AC, and BC intersect the graph again at points D, E, and F, respectively, and the sum of the x-coordinates of D, E, and F is 24. What is $f(0)$?

12. If a,b,c,p,q and $r \in R-\{0\}$ such that

$$ap+bq+cr+\sqrt{\left(a^2+b^2+c^2\right)\left(p^2+q^2+r^2\right)}=0$$

then find value of $\frac{aq}{bp}+\frac{br}{cq}+\frac{cp}{ar}$.

13. Let

$$\vec{a}=(2+\sin\theta)\hat{i}+\cos(\theta)\hat{j}+\sin(2\theta)\hat{k}$$

$$\vec{b}=\sin\left(\theta+\frac{2\pi}{3}\right)\hat{i}+\cos\left(\theta+\frac{2\pi}{3}\right)\hat{j}+\sin\left(2\theta+\frac{4\pi}{3}\right)\hat{k}$$

$$\vec{c}=\sin\left(\theta-\frac{2\pi}{3}\right)\hat{i}+\cos\left(\theta-\frac{2\pi}{3}\right)\hat{j}+\sin\left(2\theta-\frac{4\pi}{3}\right)\hat{k}$$

be three vectors where $\theta \in \left(0,\frac{\pi}{2}\right)$. Let V is the maximum volume of tetrahedron whose coterminous edges are represented by the vector $2\vec{b}\times\vec{c}, 3\vec{c}\times\vec{a}$ and $\vec{a}\times 4\vec{b}$ then the value of V is

SECTION – IV
(MATCHING TYPE)

This section contains **THERE (03)** Matching List Sets.

- Each set has **ONE** Multiple Choice Question.
- Each set has **TWO** lists : **List-I** and **List-II.**
- **List-I** has **Four** entries (I), (II), (III) and (IV) and **List-II** has **Five** entries (P), (Q), (R), (S) and (T).
- **FOUR** options are given in each Multiple Choice Question based on **List-I** and **List-II** and **ONLY ONE** of these four options satisfies the condition asked in the Multiple Choice Question.
- Answer to each question will be evaluated according to the following marking scheme :

Full Marks:+3 **ONLY** if the option corresponding to the correct combination is chosen;
Zero Marks: 0 If none of the options is chosen (i.e. the question is unanswered);
Negative Marks: –1 In all other cases.

14. Let Π be the plane parallel to y-axis and containing the points $(1,0,1)$ and $(3,2,-1)$. $A\equiv(4,0,0)$ and $B\equiv(6,0,-2)$ are two points and $P\equiv(x_0,y_0,z_0)$ is a variable point on the plane $\Pi=0$. Match List-I with List-II and select the correct answer using the code given below the list.

List-I		List-II	
(I)	If the equation of the plane $\Pi=0$ is $x+ay+bz=c$, then $\lvert a+b+c\rvert$ is	(P)	16
(II)	If $(PA+PB)$ is minimum, then $\lvert 4x_0+y_0+2z_0\rvert$ is	(Q)	12
(III)	If $(PA+PB)$ is minimum, then $\lvert x_0+y_0+z_0\rvert$ is	(R)	3
(IV)	If the reflection of the line AB in the plane $\Pi=0$ is, $\frac{x-2}{1}=\frac{y-\alpha}{0}=\frac{z+\beta}{-1}$, then $(\alpha^4+\beta^4)=$	(S)	2
		(T)	10

Then correct option is

A) I → R;II → Q; III → S;IV → T **B)** I → Q;II → R; III → S;IV → P

C) I → R;II → Q; III → S; IV → P **D)** I → R;II→ S; III→ Q; IV → P

15. Let α,β and γ be the distinct roots of the equation $x^3-7x+6=0$. Consider the set $T=\{\alpha,\beta,\gamma\}$ for a 3×3 matrix $M=(a_{ij})_{3\times3}$, define $R_i=a_{i1}+a_{i2}+a_{i3}$ and $C_j=a_{1j}+a_{2j}+a_{3j}$ for $i=1,2,3$ and $j=1,2,3$.

Match each entry in List-I to the correct entry in List-II.

List-I		List-II	
(P)	The number of matrices $M=(a_{ij})_{3\times3}$ with all entries in T such that $R_i=C_j=0$ for all i,j, is	(1)	1
(Q)	The number of symmetric matrices $M=(a_{ij})_{3\times3}$ with all entries in T such that $C_j=0$ for all j, is	(2)	12
(R)	Let $M=(a_{ij})_{3\times3}$ be a skew symmetric matrix such that $a_{ij}\in$ T for $i>j$. Then the number of elements in the set $\left\{\begin{pmatrix}x\\y\\z\end{pmatrix}:x,y,z\in\mathbb{R},M\begin{pmatrix}x\\y\\z\end{pmatrix}=\begin{pmatrix}a_{12}\\0\\-a_{23}\end{pmatrix}\right\}$ is	(3)	infinite
(S)	Let $M=(a_{ij})_{3\times3}$ be a matrix with all entries in T such that $R_i=0$ for all i. Then the absolute value of the determinant of M is	(4)	6
		(5)	0

Then correct option is

A) P→2;Q→4;R→3;S→5

B) P→3;Q→2;R→4;S→2

C) P→2;Q→2;R→5;S→5

D) P→3;Q→4;R→3;S→5

SECTION – I
(SINGLE CORRECT ANSWER TYPE)

This section contains **FOUR (04)** questions.

- Each question has **FOUR** options (A), (B), (C) and (D). **ONLY ONE** of these four options is the correct answer.
- For each question, choose the option corresponding to the correct answer.
- Answer to each question will be evaluated according to the following marking scheme:

Full Marks : +3 If **ONLY** the correct option is chosen;
Zero Marks : 0 If none of the options is chosen (i.e. the question is unanswered);
Negative Marks : −1 In all other cases

17. A charged particle of mass m and positive charge q is incident on a rectangular region of uniform magnetic field $\vec{B}$, directed out of the plane. The particle enters the field with speed v, making an angle α with the normal to the magnetic strip. The strip has thickness d. It is known that the particle that enters the strip perpendicularly would go through the strip.

For large d, the particle "turns back" before exiting the strip. Let α_{max} be the maximum entry angle for which the particle still emerges out of the strip.

Which of the following is the correct expression for α_{max}, if radius of circular path inside the magnetic field region is r.

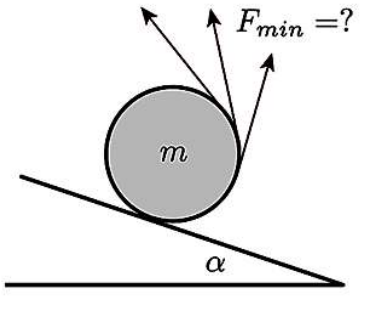

A) $\alpha_{max} = \cos^{-1}\left(\frac{d}{r}\right)$ **B)** $\alpha_{max} = \sin^{-1}\left(\frac{d}{r}\right)$

C) $\alpha_{max} = \sin^{-1}\left(1-\frac{d}{r}\right)$ **D)** $\alpha_{max} = \cos^{-1}\left(1-\frac{d}{r}\right)$

18. A solid cylinder of mass m and radius r rests on a rough incline of angle α. A light, inextensible string is wound over the cylinder, and a force F is applied at the free end of the string in any convenient direction. The coefficient of friction between the cylinder and the incline is sufficiently large to prevent slipping.

A) $n=\frac{qB^2R^2}{2mEd}$ **B)** $n=\frac{qBR}{2Ed}$ **C)** $n=\frac{qB^2R^2}{4mEd}$ **D)** $n=\frac{2qB^2R^2}{mEd}$

SECTION – II
(ONE OR MORE CORRECT ANSWER TYPE)

This section contains **THERE (03)** questions.

- Each question has **FOUR** options (A), (B), (C) and (D). **ONE OR MORE THAN ONE** of these four option(s) is(are) correct answer(s).
- For each question, choose the option(s) corresponding to (all) the correct answer(s).
- Answer to each question will be evaluated according to the following marking scheme :

Full Marks :+4 **ONLY** if (all) the correct option(s) is(are) chosen;
Partial Marks: +3 If all the four options are correct but **ONLY** three options are chosen;
Partial Marks: +2 If three or more options are correct but **ONLY** two options are chosen, both of which are correct ;
Partial Marks: +1 If two or more options are correct but **ONLY** two options are chosen, and it is a correct option ;
Zero Marks : 0 If none of the options is chosen (i.e. the question is unanswered);
Negative Marks : –2 In all other cases.

For example, in a question, if (A), (B) and (D) are the ONLY three options corresponding to correct answers, then choosing ONLY (A), (B) and (D) will get +4 marks; choosing ONLY (A) and (B) will get +2 marks; choosing ONLY (A) and (D) will get +2 marks; choosing ONLY (B) and (D) will get +2 marks; choosing ONLY (A) will get +1 mark; choosing ONLY (B) will get +1 mark; choosing ONLY (D) will get +1 mark; choosing no option (i.e. the question is unanswered) will get 0 marks; and choosing any other combination of options will get -2 marks.

21. A metallic ball of mass M and charge $Q>0$ is attached to a vertical spring of spring constant k. The system is in equilibrium under gravity.
At $t=0$, a uniform vertical electric field of magnitude E is switched on instantaneously. The field is initially directed downwards and thereafter always remains in the same direction as the velocity of the ball.

Let $t=7\pi\sqrt{\frac{M}{k}}$.

Which of the following statements are correct?

A) The time period of oscillation of the system is independent of both g and E

B) The equilibrium position shifts by $\Delta x=\frac{QE}{k}$ each time the direction of the electric field reverses.

C) After the given time t, the ball is displaced downward from its initial position by $\frac{14QE}{k}$

D) The amplitude of oscillation increases by $\frac{QE}{k}$ after every half oscillation.

22. A rigid, closed cylinder of inner radius R and inner height h contains a liquid occupying a fraction k of its total volume. The remaining volume is filled with air.

Initially, the system is at temperature T_1. The cylinder is then placed in a freezer maintained at temperature T_2 (T_2 < melting point of the liquid), so the liquid completely solidifies. (T_1 *and* T_2 *are absolute temperature*)

The density of the liquid is ρ_0 and the density of the solid formed is $\lambda\rho_0$

Let the final air pressure be P_2 and initial air pressure be P_1, total volume V.

Assuming:

- The cylinder volume does not change,
- No leakage of air,
- Air behaves as an ideal gas,

Which of the following statement(s) is/are correct?

A) The final volume available for air is $V\left(1-\frac{k}{\lambda}\right)$.

B) The pressure ratio is $\frac{P_2}{P_1}=\frac{(1-k)}{\left(1-\frac{k}{\lambda}\right)}\cdot\frac{T_2}{T_1}$

C) If $\lambda<1$, then air pressure always increases after freezing.

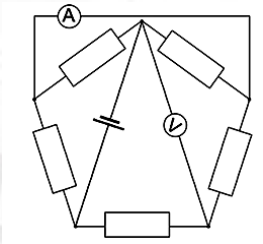

D) If $\lambda>1$, then air pressure always decreases after freezing.

23. In the circuit shown, all resistors have resistance $R=1\Omega$.

The battery provides a potential difference of $U=7\text{V}$.

The ammeter is ideal (zero resistance) and the voltmeter is ideal (infinite resistance).

The circuit is as shown in the given figure.

A) The equivalent resistance across cell of the circuit is $\frac{7}{6}\Omega$.

B) The total current drawn from the battery is 6A.

C) The ammeter reading is 1A.

D) The voltmeter reading is 5V.

SECTION-III
(NUMERICAL VALUE)

This section contains **SIX (06)** questions.

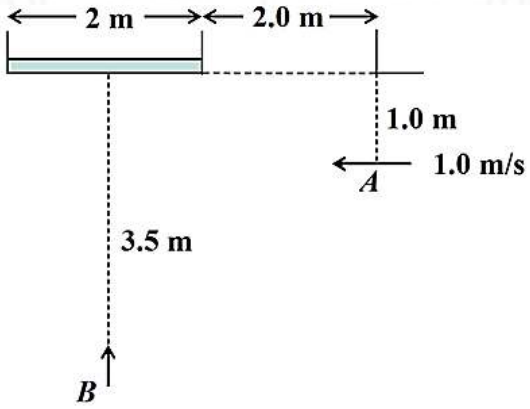

- The answer to each question is a NUMERICAL VALUE .
- For each question, enter the correct integer corresponding to the answer using the mouse and the onscreen virtual numeric keypad in the place designated to enter the answer.
- Answer to each question will be evaluated according to the following marking scheme

Full Marks : +4 If ONLY the correct integer is entered; Zero Marks : 0 In all other cases..

24. A **horizontal tube** of uniform inner diameter $d = 4.0\,\text{cm}$ is closed at both ends by thin, easily ruptured air-tight membranes. The air inside the tube is completely evacuated. A solid spherical ball of mass $m = 24$ gm and diameter equal to the inner diameter of the tube is placed just behind the **left** membrane as shown. The external air pressure is $P_0 = 100\,kPa$. For firing, the left membrane is ruptured so that atmospheric air enters the tube from the left and pushes the ball towards the **right** end. Assume that the tube is sufficiently long so that the ball finally ruptures the right membrane and emerges from the tube. Initially, the ball is at a distance $l = 150\,cm$ from the right membrane and is at rest. Neglect friction and any change in external pressure. Find the **speed (in m/s) of the ball just before it ruptures the right membrane**.

25. On a big room's wall there is a mirror of width 2.0 m. A person A is standing 2.0 m away from the mirror and 1.0 m away from the wall. The person starts to move parallel to the mirror with a speed of 1.0 m/s. At the same moment another person B starts to move with a speed of 1.0 m/s towards the mirror on the mirror's centerline. Initially, person B is standing at a distance 3.5 m from the mirror as shown. Assuming perfect reflection and neglecting eye height differences, determine the time (in SI unit) after which **A and B first see each other in the mirror.**

26. A boy measures the speed of wind relative to himself while riding a bicycle on a straight road.

- When he rides in one direction with speed $10\ \text{km h}^{-1}$, he finds the wind speed relative to him to be $20\ \text{km h}^{-1}$.
- When he rides in the opposite direction with speed $20\ \text{km h}^{-1}$, he again measures the wind speed relative to him as $20\ \text{km h}^{-1}$.

Assuming the wind velocity is constant (both in magnitude and direction), find the speed (in km / hr) of the wind with respect to the ground.

27. A stretched violin string of total length L is sounded in two different ways:

Case-1 (Pressing the string):

A violinist presses the string firmly at a point located at a distance $\frac{3}{7}L$ from one end, so that only the shorter segment vibrates. The fundamental frequency heard is f_1.

Case-2 (Lightly touching the string):

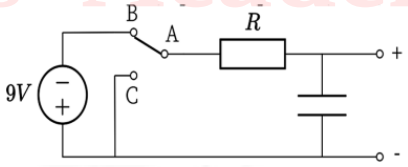

The violinist now only touches the string at the same point $\frac{3}{7}L$, without pressing it down.

This forces a node at that point, and the resulting fundamental frequency is f_2.

Assume tension and linear mass density of the string remain the same in both cases.

Find the ratio $\frac{f_2}{f_1}$.

28. A 9 V DC source, a resistor R, a capacitor C, and a two-position switch are connected as shown.

Switch positions:

• **ON:** A connected to B

• **OFF:** A connected to C

It is observed that:

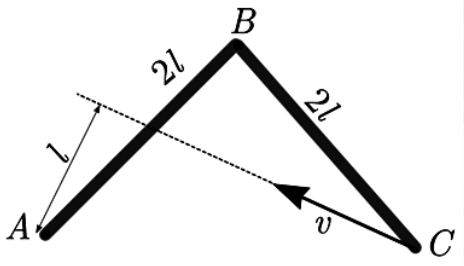

- If the device is first switched **OFF** for a long time and then the polarity of the 9 V source is reversed, the device functions normally after switching **ON** again.
- But if the source polarity is reversed without switching **OFF**, the resistor R gets damaged due to excessive power dissipation.

Assume R burns if the power dissipated in it exceeds 0.25 W.

If R_{min} and R_{max} are values of R for safe operation. Fill the value of R_{min} / R_{max}.

29. Two light, rigid rods, each of length $2l$, are hinged at a common point B. One end of the first rod is fixed at a stationary point A, while the other end of the second rod is connected to a point C, which moves with a constant speed v along a straight line. The path of point C is such that the line of motion passes at a perpendicular distance l from point A. At the instant when the distance $AC = 2l$, the magnitude of instantaneous acceleration of the hinge point B is given by $\frac{xv^2}{l}$. fill the value of x.

SECTION – IV
(MATCHING TYPE)

This section contains **THERE (03)** Matching List Sets.

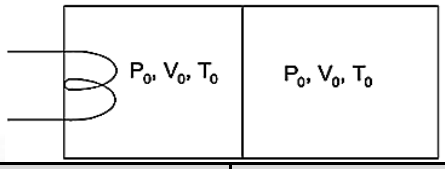

- Each set has **ONE** Multiple Choice Question.
- Each set has **TWO** lists : **List-I** and **List-II.**
- **List-I** has **Four** entries (I), (II), (III) and (IV) and **List-II** has **Five** entries (P), (Q), (R), (S) and (T).
- **FOUR** options are given in each Multiple Choice Question based on **List-I** and **List-II** and **ONLY ONE** of these four options satisfies the condition asked in the Multiple Choice Question.
- Answer to each question will be evaluated according to the following marking scheme :

Full Marks:+3 **ONLY** if the option corresponding to the correct combination is chosen;
Zero Marks: 0 If none of the options is chosen (i.e. the question is unanswered);
Negative Marks: –1 In all other cases.

30. A non-conducting, movable piston separates a non - conducting container in two equal parts each of volume V_0. A diatomic gas is filled in the left part and a monoatomic gas is filled in the right part of the container. Initially both the gas have temperature T_0 and pressure P_0. Now the gas on the left is heated slowly until the gas on the right is compressed to volume $\frac{V_0}{8}$

P_r = Final pressure of the gas on the right side
n = Number of moles of diatomic gas
ΔQ = Total heat given by the heater
T_L = Final temperature on the left side

CHEMISTRY **Max Marks: 60**

SECTION – I
(SINGLE CORRECT ANSWER TYPE)

This section contains **FOUR (04)** questions.

- Each question has **FOUR** options (A), (B), (C) and (D). **ONLY ONE** of these four options is the correct answer.
- For each question, choose the option corresponding to the correct answer.
- Answer to each question will be evaluated according to the following marking scheme:

Full Marks : +3 If **ONLY** the correct option is chosen;
Zero Marks : 0 If none of the options is chosen (i.e. the question is unanswered);
Negative Marks : −1 In all other cases

33. Which of the following compounds or mixtures contain lithium

A) Litharge **B)** Spodumene **C)** Hydrolith **D)** Lithopone

34. Which aspect of comparison is wrongly listed (either partially or fully) in the chart drawn below

		White Phosphorus	Red Phosphorus
A)	Physical appearance	Translucent white waxy solid	Red or red-brown with iron grey lustre
B)	Solubility	Soluble in carbon disulphide	Insoluble in carbon disulphide
C)	Chemiluminescence	Positive	Negative
D)	Electrical conduction	Poor – discrete P_4 tetrahdras don't allow electrons to travel through them	Excellent – linked P_4 tetrahedras allow electrons to travel rapidly through them

35. Under identical conditions, how many mL of 1M KOH and $2M\,H_2SO_4$ solutions are required to produce a resulting volume of 100 ml with the highest rise in temperature

A) 60 and 40 respectively **B)** 40 and 60 respectively

C) 80 and 20 respectively **D)** 50 and 50 respectively

36. Qualitative analysis can be used to identify ions in a salt mixture without ascertaining their quantity. To facilitate this objective, basic radicals have been classified into certain groups. Selective precipitation is the ability to separate cations by forcing precipitation of a specific set of ions as solid out of the solution. The creation of these groups is based on this idea itself. For instance, Group 1 consists of silver (I), lead (II) and mercury (I) cations which get selectively precipitated on adding dilute HCl solution. The latter is called the group reagent.

	Ksp@ 25° C
$Hg_2^{+2} + 2Cl^- \rightarrow Hg_2Cl_2(s)$	1.4×10^{-18}
$Ag^+ + Cl^- \rightarrow AgCl(s)$	1.8×10^{-10}
$Pb^{+2} + 2Cl^- \rightarrow PbCl_2(s)$	1.6×10^{-5}

Consider the following experiment where a solid (X) is being put into 100 ml H_2O. In which case maximum number of chloride ions will be furnished inside the test tube.

Atomic weights: Cl (35.5), Ag (108), Hg (200), Pb (207)

A) $w=5, X=Hg_2Cl_2, T=25$ **B)** $w=2, X=AgCl, T=5$

C) $w=1, X=PbCl_2, T=25$ **D)** $w=0.4, X=PbCl_2, T=75$

SECTION – II
(ONE OR MORE CORRECT ANSWER TYPE)

This section contains **THERE (03)** questions.

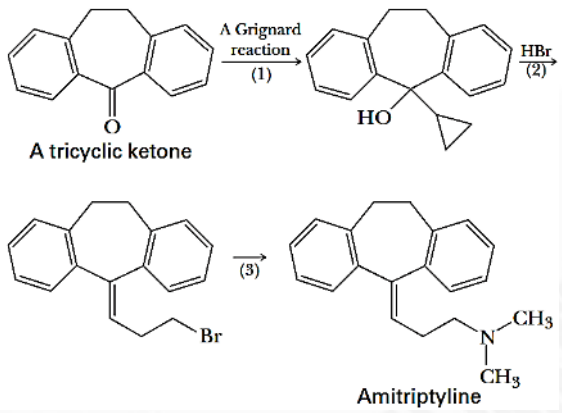

- Each question has **FOUR** options (A), (B), (C) and (D). **ONE OR MORE THAN ONE** of these four option(s) is(are) correct answer(s).
- For each question, choose the option(s) corresponding to (all) the correct answer(s).
- Answer to each question will be evaluated according to the following marking scheme :

Full Marks :+4 **ONLY** if (all) the correct option(s) is(are) chosen;
Partial Marks: +3 If all the four options are correct but **ONLY** three options are chosen;
Partial Marks: +2 If three or more options are correct but **ONLY** two options are chosen, both of which are correct ;
Partial Marks: +1 If two or more options are correct but **ONLY** two options are chosen, and it is a correct option ;
Zero Marks : 0 If none of the options is chosen (i.e. the question is unanswered);
Negative Marks : –2 In all other cases.

For example, in a question, if (A), (B) and (D) are the ONLY three options corresponding to correct answers, then choosing ONLY (A), (B) and (D) will get +4 marks; choosing ONLY (A) and (B) will get +2 marks; choosing ONLY (A) and (D) will get +2 marks; choosing ONLY (B) and (D) will get +2 marks; choosing ONLY (A) will get +1 mark; choosing ONLY (B) will get +1 mark; choosing ONLY (D) will get +1 mark; choosing no option (i.e. the question is unanswered) will get 0 marks; and choosing any other combination of options will get -2 marks.

37. Amitriptyline, sold under the brand name **Elavil** is a tricyclic antidepressant. The flowchart below outlines its chemical synthesis.

Select the correct statement(s)

A) ▷— MgI is a possible Grignard reagent in step-1 followed by acid workup

B) Step-2 involves the formation of a highly stable carbocation intermediate

C) a primary carbocation is not formed as an intermediate at any point during the drug making

D) diethyl amine attacks in an S_{N_2} manner in step-3

38. Unequal weights of Hg and I_2 are allowed to react completely to form a mixture of HgI_2 and Hg_2I_2 leaving none of the reactants. Given atomic weight of mercury is 200 and molecular weight of iodine is 250; which of the following ratios of mole (n) or weight (w) may hold true for the reactants

A) $n_{Hg} : n_{I_2} = 3:2$ **B)** $w_{Hg} : w_{I_2} = 6:5$ **C)** $n_{Hg} : n_{I_2} = 4:3$ **D)** $n_{Hg} : n_{I_2} = 5:4$

39. Assuming room temperature to be $25^{\circ}C$ (298 K), identify the correct statement(s)

A) at room temperature sulphur exists in α – form which transforms to β – form at a higher temperature

B) at room temperature tin exists in β – form which transforms to α – form at a lower temperature

C) equal number of molecules exist in α – form and β – form at equilibrium when glucose is dissolved in water at room temperature

D) unequal number of α – particles and β – particles are emitted when $_{92}U^{238}$ decays to $_{82}Pb^{206}$ at room temperature

SECTION-III
(NUMERICAL VALUE)

This section contains **SIX (06)** questions.

- The answer to each question is a NUMERICAL VALUE.
- For each question, enter the correct integer corresponding to the answer using the mouse and the onscreen virtual numeric keypad in the place designated to enter the answer.
- Answer to each question will be evaluated according to the following marking scheme

Full Marks : +4 If ONLY the correct integer is entered; Zero Marks : 0 In all other cases.

40. A sample contains three H-atoms and the only electron in each of these atoms is present in the **O** (this is not zero) level. When these excited atoms make a transition to the ground state, what maximum number of distinct spectral lines will be observed?

41. Since early 1990s, NaN_3 has been the primary gas generator in car airbags. The overall reaction is

$$6\,NaN_3(s) + Fe_2O_3(s) \longrightarrow 3Na_2O(s) + 2Fe(s) + 9N_2(g)$$

How many grams of NaN_3 would be required to provide 75L of nitrogen gas at $25^{\circ}C$ and 748 mm Hg assuming ideal gas behavior and excess of Fe_2O_3 to be present.

Atomic weights: Na(23), N(14)

42. w, x-Dinitrophenol is the IUPAC name of the least acidic isomer of dinitrophenol and y, z-Dinitrophenol is the IUPAC name of the most acidic isomer of dinitrophenol.

If w, x, y and z are natural numbers, report the value of $\mathbf{(w+y)\times(x+z)}$

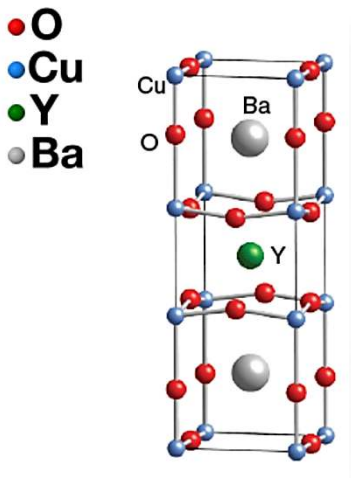

43. Five organic acids are listed below, each against a unique serial number

1. Malic acid
2. Maleic acid
3. Malonic acid
4. Mandelic acid
5. Mellitic acid

If the sum of serial numbers of all chiral molecules from this list is x and the sum of serial numbers of all dicarboxylic acid from this list is y, report the value of $\boldsymbol{x \times y}$ (x multiplied by y)
