MATHEMATICS

Max Marks: 60

SECTION – I
(NUMERICAL VALUE TYPE)

This section contains **EIGHT (08)** questions.

- The answer to each question is a **NUMERICAL VALUE.**
- For each question, enter the correct numerical value of the answer using the mouse and the on-screen virtual numeric keypad in the place designated to enter the answer. If the numerical value has more than two decimal places, **truncate/round-off** the value to **TWO** decimal places.
- Answer to each question will bee evaluated according to the following marking scheme :

Full Marks:+3 **ONLY** if the correct numerical value is entered ;
Partial Mark: 0 In all other cases.

1. Let **P** be the number of solution of the equation

$\log_2(x) = 5\sin(5\pi x), x \in [0,32]$ and

The differential equation given by

$\left(\sin\left(x^2y\right)+2x^2y\cos\left(x^2y\right)\right)dx+\left(x^3\cos\left(x^2y\right)+1\right)dy=0$ has $y(0)=1$ and $y(\alpha)=1$. If Q denotes the value of $\left|\alpha\sin\left(\alpha^2\right)\right|$. Then $P+Q$ is ___

2. Suppose that the angles of ΔABC satisfy $\cos(3A)+\cos(3B)+\cos(3C)=1$. Two sides of the triangle have lengths 10 and 13. Find the maximum possible length for the remaining side of ΔABC.

3. Find the sum of the areas of all triangles whose vertices are also vertices of a cube whose side length is 1 unit

4. Let v and w be distinct, randomly chosen roots of the equation $z^{1997}-1=0$. Find the probability that $\sqrt{2+\sqrt{3}} \le |v+w|$

5. Find the smallest positive integer n for which the expansion of $(xy-3x+7y-21)^n$, after like terms have been collected, has at least 1996 terms.

6. A sequence of numbers $x_1, x_2, x_3, \ldots, x_{100}$ has the property that, for every integer k between 1 and 100, inclusive, the number x_k is k less than the sum of the other 99 numbers. Find $\frac{1}{x_{50}}$

7. For positive integer n, let S_n denotes the minimum value of the sum

$$\sum_{k=1}^{n}\sqrt{(2k-1)^2+a_k^2}$$

where $a_1, a_2, \ldots, a_n$ are positive real numbers whose sum is 17. If there exist a unique positive integer $\boldsymbol{n}$ for which S_n is also an integer then $\frac{n}{2}$ is _____.

8. If a differentiable function $f(x)$ satisfies a functional rule

$f(x)+f(x+2)+f(x+4)=0, \forall x \in R$ and $f'(12)=4$, then the value of

$$\lim_{x\to 0}\frac{f^2(x+12)-f(x)f(0)-f(x+6)f(18)+f^2(18)}{x\left(\frac{\pi}{4}-\tan^{-1}(1-x)\right)}.$$

SECTION – II
(ONE OR MORE CORRECT ANSWER TYPE)

This section contains **SIX (06)** questions.

- Each question has **FOUR** options (A), (B), (C) and (D). **ONE OR MORE THAN ONE** of these four option(s) is(are) correct answer(s).
- For each question, choose the option(s) corresponding to (all) the correct answer(s).
- Answer to each question will be evaluated according to the following marking scheme :

Full Marks :+4 **ONLY** if (all) the correct option(s) is(are) chosen;
Partial Marks: +3 If all the four options are correct but **ONLY** three options are chosen;
Partial Marks: +2 If three or more options are correct but **ONLY** two options are chosen, both of which are correct ;
Partial Marks: +1 If two or more options are correct but **ONLY** two options are chosen, and it is a correct option ;
Zero Marks : 0 If none of the options is chosen (i.e. the question is unanswered);
Negative Marks : –2 In all other cases.

9. Let a, b, and c be distinct complex number such that

$(a-b)^7+(b-c)^7+(c-a)^7=0$

Then which of the following statement(s) is/are correct?

A) $a^2+b^2+c^2=ab+bc+ca$

B) $\frac{1}{(a-b)^2}+\frac{1}{(b-c)^2}+\frac{1}{(c-a)^2}=0$

C) $(a-b)^3=(b-c)^3=(c-a)^3$

D) If a, b, and c form a triangle ΔABC, then sum of lengths of altitudes from any point inside ΔABC is. $\left|a-b\right|\mathrm{Im}\left(\frac{c-a}{b-a}\right)$

10. Let f, g be functions defined by

$$f(x)=\lim_{n\to\infty}\left(\frac{n!(x+n)\left(x+\frac{n}{2}\right)\ldots\left(x+\frac{n}{n}\right)}{n^n}\right)^{\frac{x}{n}} \text{ and } \ln\left(f(x)\right)=\int_0^x g(t)dt \text{ for } x>0.$$

If $\alpha=e^{\beta/2}$, where $\beta=\lim_{n\to\infty}\left(1+\frac{1+\frac{1}{2}+.....+\frac{1}{n}}{n^2}\right)^n$, then which of the following statement(s) is (are) TRUE ?

A) $\alpha^{g(x)}<1+x$ for all $x\in(0,\infty)$ **B)** $\alpha^{g(8)}=3$

C) $\alpha^{g(3)}=4$ **D)** $g(7)=\frac{3}{2}g(3)$

11. Let $f:\mathbb{R}\to\mathbb{R}$ be a differentiable function such that

$$f(x)=\int_0^x e^{x-y}f'(y)dy-(x^2-x+1)e^x$$

for all $x\in\mathbb{R}$. Then, which of the following statement(s) is/are TRUE ?

A) f has a local minimum at $x=-1/2$

B) $f(x)>1-x+\frac{3x^2}{2}-\frac{5x^3}{6}$ for all $x\in(0,\infty)$

C) For every $x>0$,there exists a $\beta\in(0,x)$ such that $f(x)\geq f'(\beta)$

D) For every $x>\frac{1}{2}$, there exists a $\beta\in(0,x)$ such that $f'(\beta)=6\beta e^{\beta}$

12. Consider three square matrices A, B and C each of order n, where n is odd satisfying $A^T=A-B$ and $B^T=B-C$, then (P^T denotes transpose of matrix P,$|P|$ represents determinant of P)

A) $|C|=2^n|B|$ **B)** $|A+B|=|A-2B|$

C) $|A-C|=|A+2B|$ **D)** $|B|=0$

13. Let $S=\{2,3,5,7,11,13,17,19,23,29,31,37\}$.

Define $\mathcal{M}$ as the collection of all 3×3 matrices whose entries belong to S, where repetition of elements is allowed. For each matrix $M\in\mathcal{M}$, let $\Delta(M)$ denote its determinant. Now define $K=\sum_{M\in\mathcal{M}}\Delta(M)$ and $T=\sum_{M\in\mathcal{M}}(\Delta(M))^3$.

Which of the following statement(s) is/are correct?

A) K is a non-negative integer. B) $T=K^3$

C) $T+K=2026$ D) K is divisible by at least 3 elements of set S

14. Let $S=\left\{(x,m)\in\mathbb{Z}\times\mathbb{Z}:\left|x^2-1\right|+\left|x^2-4\right|=m\cdot x\right\}$

Define $T=\{x+m:(x,m)\in S\}$ Which of the following belong to T?

A) -14 B) 12 C) 4 D) 10

SECTION – III
(MATCHING TYPE)

This section contains **FOUR (04)** Matching List Sets.

- Each set has **ONE** Multiple Choice Question.
- Each set has **TWO** lists : **List-I** and **List-II.**
- **List-I** has **Four** entries (I), (II), (III) and (IV) and **List-II** has **Five** entries (P), (Q), (R), (S) and (T).
- **FOUR** options are given in each Multiple Choice Question based on **List-I** and **List-II** and **ONLY ONE** of these four options satisfies the condition asked in the Multiple Choice Question.
- Answer to each question will be evaluated according to the following marking scheme :

Full Marks:+3 **ONLY** if the option corresponding to the correct combination is chosen;
Zero Marks: 0 If none of the options is chosed (i.e. the question is unanswered);
Negative Marks: –1 In all other cases.

15. Let $\vec{a}$ and $\vec{b}$ be two unit vectors, which are orthogonal.

Two lines $L_1:\vec{r}=6\vec{a}-\vec{b}+\lambda(2\vec{b}-\vec{a})$ and $L_2:\vec{r}=\vec{a}-\vec{b}+\mu(\vec{a}+3\vec{b})$ where $\lambda,\mu\in R$ are coplanar, then choose the correct option from the following List(s) (where [·] represents greatest integer function):

List-I		List-II	
(P)	$\lambda+\mu$ is equal to (where lines intersect)	(1)	1
(Q)	$\lvert\lambda-\mu\rvert$ is equal to (where lines intersect)	(2)	5
(R)	If θ is angle between L_1 and L_2, then $[\tan\theta]+3$	(3)	6
(S)	Distance of point of intersection of L_1 and L_2 from origin is 'd', then $[d]$ is	(4)	4
		(5)	0

Sri Chaitanya Educational Institutions
Infinity Learn

For More Join: @IITJEE_Advanced

A) $P \to 2; Q \to 1; R \to 4; S \to 4$ **B)** $P \to 2; Q \to 1; R \to 4; S \to 1$

C) $P \to 2; Q \to 1; R \to 4; S \to 2$ **D)** $P \to 2; Q \to 1; R \to 4; S \to 3$

16. Let $a \in R, f(x) = x^3 - 3x + a$

	List - I		List II
(I)	If $f(x) = 0$ has only one real solution then number of real solutions for $f(f(x)) = 0$ is	(P)	1
(II)	If $f(x) = 0$ has only two real solutions, then number of real solutions of $f(f(x)) = 0$ is	(Q)	3
(III)	Absolute difference of values of 'a' for which $f(x) = 0$ has only two real solutions, is	(R)	4
(IV)	If $a = -1$, number of real solutions of $f(f(x)) = 0$ is	(S)	6
		(T)	7

A) $I \to Q; II \to S; III \to S; IV \to S$ **B)** $I \to P; II \to R; III \to R; IV \to T$

C) $I \to R; II \to R; III \to S; IV \to T$ **D)** $I \to Q; II \to R; III \to R; IV \to S$

17. Match the following List-I with List-II.

	List-I		List-II
(P)	If function f satisfies $\int_0^1 \left(f^4(x) - 8x^2 f^2(x)\right)dx + \frac{16}{5} = 0$ then the value of $f^2(1)$ is	(1)	0
(Q)	If the point of inflection for the curve $y = \int_0^x \sqrt{1-t^4}\,dt$ is (α, β), then $\alpha + \beta$ is equal to	(2)	1
(R)	Let f be differentiable and function g is defined as $g(x) = \int_0^x \left(t^2 \cdot \int_1^x f(u)\,du\right)dt$, also $f(1) = 3$, and $g'(1) + g''(1) = n_1 + \frac{f'(1)}{n_2}$ (Where $n_1, n_2 \in N$), then $n_1 - n_2$ is	(3)	2

SECTION – I
(NUMERICAL VALUE TYPE)

This section contains **EIGHT (08)** questions.

- The answer to each question is a **NUMERICAL VALUE.**
- For each question, enter the correct numerical value of the answer using the mouse and the on-screen virtual numeric keypad in the place designated to enter the answer. If the numerical value has more than two decimal places, **truncate/round-off** the value to **TWO** decimal places.
- Answer to each question will bee evaluated according to the following marking scheme :

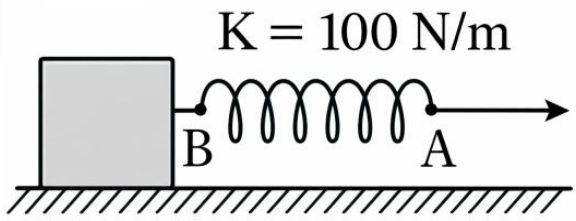

Full Marks: +3 **ONLY** if the correct numerical value is entered ;
Partial Mark: 0 In all other cases.

19. In the given figure curved surface of frustum has no charge on it while circular ends have uniform surface charge density σ. Point charge q is placed on axis of frustum. Net force exerted by frustum on charge q is $x \times 10^{-6}$ N. Find x. $\left(\sigma = 2\frac{C}{m^2}\right)$

20. In a Quincke's interference tube experiment, a sound of fixed frequency f = 1800 Hz from a loudspeaker is sent into the two arms of the tube. One arm is movable, so its length can be changed, introducing an extra path difference. The sound waves recombine and are heard in a detector. Initially, the detector output is at a maximum (constructive interference). As the movable arm is displaced forward, the first minimum occurs when it has moved by x = 9.5 cm. The speed of sound (in m/s) is :-

21. A block lying on a smooth surface with spring connected to it is pulled by an external force as shown. The velocity of ends A and B of the spring are 4 m/s and 2 m/s respectively. If the energy of the spring is increasing at the rate of 20 J/sec, then the stretch (in SI unit) in the spring is

22. One mole of a monoatomic ideal gas is subjected to a thermodynamic cycle shown in the Temperature-Entropy (T-S) diagram. The cycle consists of three processes connecting states A, B, and C.

The states are defined by their entropy and temperature coordinates as :

- State A: (S_0, T_0)
- State B: $(2S_0, 2T_0)$
- State C: $(S_0, 2T_0)$

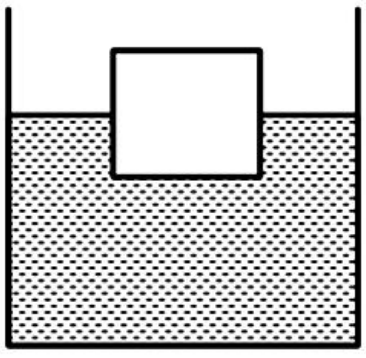

The processes are as follows:

1. A $\rightarrow$ B: A process where temperature increases linearly with entropy.
2. B $\rightarrow$ C: An isothermal compression process.

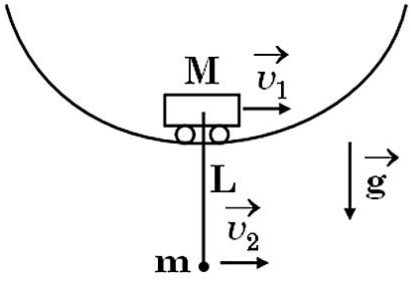

3. C - A: An adiabatic (isentropic) expansion process. For this cyclic process, the ratio of the magnitude of the heat rejected during the isothermal process to the net work done by the gas engine is found to be an integer, Z. Find the value of Z.

23. A cubical block of side 30 cm having density 500 kg/m^3 floats in water (density 1000 kg/m^3) as shown. Dimensions of base of container is $45cm \times 60cm$. Find minimum work done by external agent (in J) so that the block just gets submerged in water. ($g = 10\ m/s^2$)

24. A trolley of mass $M = 2\text{kg}$ moves along a concave bridge forming an arc of a circle of radius $R = 1\text{m}$. A rope of length $L = 50\text{cm}$ is attached to the trolley, at the end of which a load of mass m is secured (see figure). At the moment when the trolley passed the lowest point of the bridge, the rope was positioned vertically, and the velocities of the trolley and load were equal to $v_1 = 3\text{m/s}$ and $v_2 = 4\text{m/s}$, respectively. At this moment, the normal force is N with which the trolley presses on the rails. The rope is weightless and inextensible, friction is absent, and the dimensions of the trolley and load are neglected. (Take : $g = 10\ \text{m/s}^2$ and $m = 1\text{kg}$)

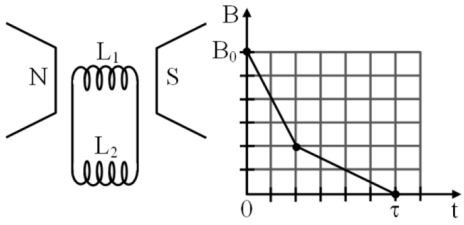

The magnitude of N is _____ Newton.

25. One mole of an ideal monatomic gas performs a process whose graph in V-T coordinates completely lies on a straight line. Find the heat capacity of the gas at the point A, at which volume is $\frac{V_0}{2}$ and temperature is $\frac{T_0}{2}$. If the heat capacity is R/n, find the value of n. Here R is universal gas constant.

26. A coil with inductance $L_1 = L$, having n turns and area S per turn, is placed in an external uniform magnetic field with induction B_0. The field lines are perpendicular to the plane of each turn. A second coil with inductance $L_2 = 4L$ is located outside the field (see Fig.). The resistances of the coils and the connecting wires are negligibly small. Initially, there is no current in the coils. The external field is switched off over a time interval τ. The time dependence of the external magnetic induction is shown in the figure. The mutual inductance of the coils is negligible. The charge that flows through coil L_1 during the switching-off of the external field is given by $x\frac{B_0 nS\tau}{L}$. The value of x is

(ONE OR MORE CORRECT ANSWER TYPE)

This section contains **SIX (06)** questions.
- Each question has **FOUR** options (A), (B), (C) and (D). **ONE OR MORE THAN ONE** of these four option(s) is(are) correct answer(s).
- For each question, choose the option(s) corresponding to (all) the correct answer(s).
- Answer to each question will be evaluated according to the following marking scheme :

Full Marks :+4 **ONLY** if (all) the correct option(s) is(are) chosen;
Partial Marks: +3 If all the four options are correct but **ONLY** three options are chosen;
Partial Marks: +2 If three or more options are correct but **ONLY** two options are chosen, both of which are correct ;
Partial Marks: +1 If two or more options are correct but **ONLY** two options are chosen, and it is a correct option ;
Zero Marks : 0 If none of the options is chosen (i.e. the question is unanswered);
Negative Marks : –2 In all other cases.

27. Two parallel electrically conducting rails are placed in a magnetic field with induction B, oriented vertically downward. The plane of the rails forms an angle α with the horizontal, and the distance between the rails is d. The upper end, the rails are connected by a resistor with resistance R. A hollow cylinder of mass m and radius r is placed at the upper end of the rails and released. The cylinder starts moving downward along the rails with rolling motion (without slipping). During the motion, its axis remains perpendicular to the direction of the rails. The situation is shown in figure.

A) The initial acceleration of the cylinder is $\frac{g}{2}\sin\alpha$.

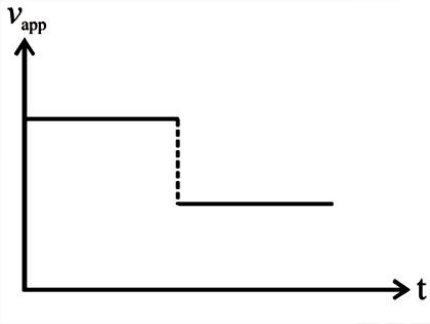

B) The time after which the cylinder starts moving with 63% of constant velocity is $\frac{2mR}{B^2d^2\cos^2\alpha}$.

C) The distance travelled after which it starts moving with a constant velocity is $\frac{3}{4}g\sin\alpha\left(\frac{mR}{B^2d^2\cos^2\alpha}\right)^2$.

D) The final velocity of the cylinder is $\frac{mgR\sin\alpha}{B^2d^2}$.

28. A source of sound and an observer are located in space. The apparent frequency of sound received by observer varies with time as shown in graph. Which of the following statements may be TRUE?

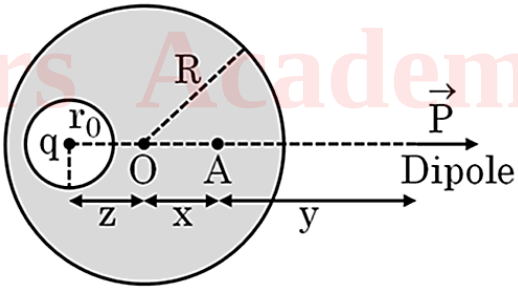

A) Only source is moving with constant velocity

B) Only observer is moving with constant velocity

C) Either source or observer or both are moving with constant velocity and their velocities are always along the line joining source and observer

D) When source and observer are moving with constant velocity and their velocities are not directed along the line joining source and observer.

29. A solid conducting sphere of radius R has a cavity of radius r_0. A point charge q is placed at center of the cavity. A dipole having dipole moment $\vec{P}$ is placed outside the sphere as shown in the figure.

Choose INCORRECT statements.

A) Force on q due to the dipole is zero.

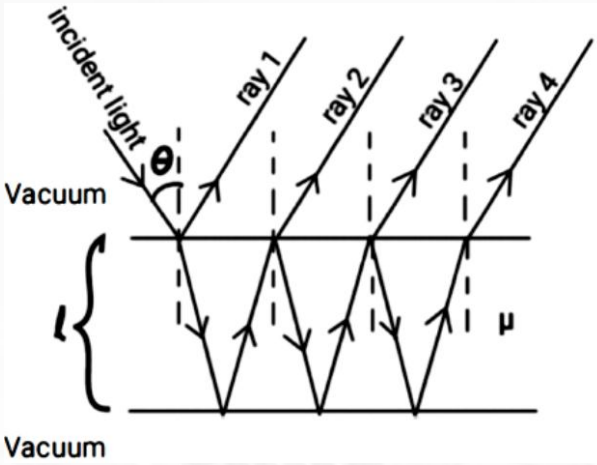

B) Force on q due to the dipole is $\frac{Pq}{2\pi\varepsilon_0(x+y+z)^3}$.

C) Potential at point A due to charges induced on outer surface of the sphere is $\frac{q}{4\pi\varepsilon_0 R}$.

D) Potential at point A is $\frac{q}{4\pi\varepsilon_0 R}-\frac{P}{4\pi\varepsilon_0 y^2}$.

30. A thin soap film of thickness ℓ and refractive index μ is present in vacuum, a parallel beam of light of wavelength λ is incident on one face of this film at an angle of θ with the normal. The beam can partly reflect and partly refract every time it is incident on one of two faces of the film in its subsequent journey to infinity. Let's consider one ray from this beam as shown in the figure and ray 1, ray 2, ray 3 ..... be the emergent rays into vacuum from the original surface, then for $\theta = 0^\circ$ we can say:

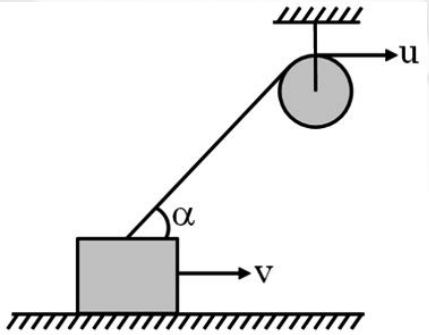

A) ray 1 and ray 4 will interfere constructively if $12\mu\ell = 307\lambda$

B) ray 2 and ray 3 will interfere constructively if $4\mu\ell = 79\lambda$

C) ray 1 and ray 3 will interfere destructively if $\mu\ell = 53\lambda$

D) ray 2 and ray 4 will interfere destructively if $8\mu\ell = 93\lambda$

31. A weightless, inextensible thread thrown over a pulley is attached to a load of mass m located on a smooth horizontal surface. A boy pulls the horizontal end of the thread with a constant speed u. At some instant, the inclined section of the thread makes an angle α with the horizontal. The pulley is at a height h, the dimensions of the block and the pulley can be neglected. The acceleration of gravity is g. Consider only the motion of the block before it lifts off the surface. The middle point of the string between the block and the pulley (not a fixed point on the string) is P

A) 'P' is moving horizontally with speed $\left(\frac{v}{2}\right)$.

B) The tension in the string at the given instant is $T = \frac{mv^2 \sin^2\alpha}{h\cos\alpha}$.

C) The magnitude of acceleration of the block is increasing.

D) The normal acceleration of the block is zero.

32. A closed container contained water of amount (m_0) and due to evaporation from surface of container, temperature of water decreases. If initial temperature of water is T_0 and rate of evaporation is μ (kg/s) :-

(Given : Latent Heat of evaporation is L_v, Specific heat capacity of water is s)

A) Rate of cooling of water at time t is $\frac{\mu L_v}{s(m_0 - \mu t)}$

B) Temperature of water at time t is $T = T_0 + \frac{L_v}{s}\ell n\left(\frac{m_0 - \mu t}{m_0}\right)$

C) Mass of water at time t is $(m_0 - \mu t)$

D) After long time evaporation stops

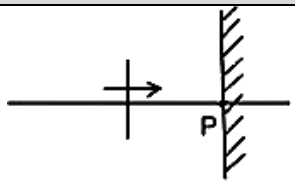

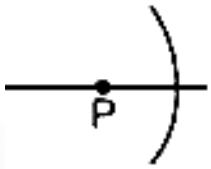

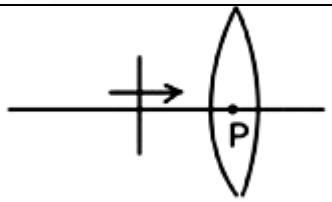

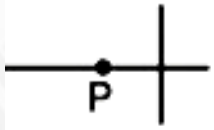

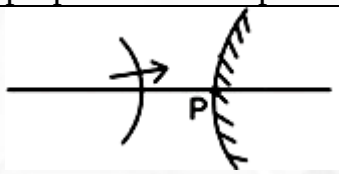

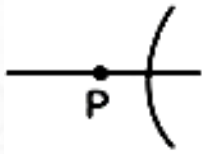

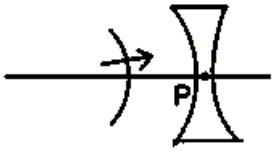

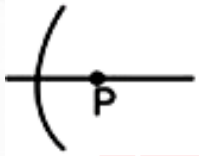

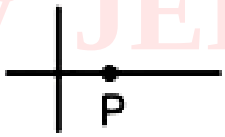

SECTION – III
(MATCHING TYPE)

This section contains **FOUR (04)** Matching List Sets.
- Each set has **ONE** Multiple Choice Question.
- Each set has **TWO** lists : **List-I** and **List-II.**
- **List-I** has **Four** entries (I), (II), (III) and (IV) and **List-II** has **Five** entries (P), (Q), (R), (S) and (T).
- **FOUR** options are given in each Multiple Choice Question based on **List-I** and **List-II** and **ONLY ONE** of these four options satisfies the condition asked in the Multiple Choice Question.
- Answer to each question will be evaluated according to the following marking scheme :

Full Marks:+3 **ONLY** if the option corresponding to the correct combination is chosen;
Zero Marks: 0 If none of the options is chosed (i.e. the question is unanswered);
Negative Marks: –1 In all other cases.

33. List-I shows some mirrors or lens with a small wave front symmetric about the principal axis heading towards them. List-II shows the possible shape of the wave front just after being incident on to them. Choose the correct option.

CHEMISTRY **Max Marks: 60**

SECTION – I
(NUMERICAL VALUE TYPE)

This section contains **EIGHT (08)** questions.

- The answer to each question is a **NUMERICAL VALUE.**
- For each question, enter the correct numerical value of the answer using the mouse and the on-screen virtual numeric keypad in the place designated to enter the answer. If the numerical value has more than two decimal places, **truncate/round-off** the value to **TWO** decimal places.
- Answer to each question will bee evaluated <u>according to the following marking scheme :</u>

Full Marks: +3 **ONLY** if the correct numerical value is entered ;
Partial Mark: 0 In all other cases.

37. In the ground state of a single mercury ($Z=80$) atom if

w = number of electrons that occupy atomic orbitals with $n=3$

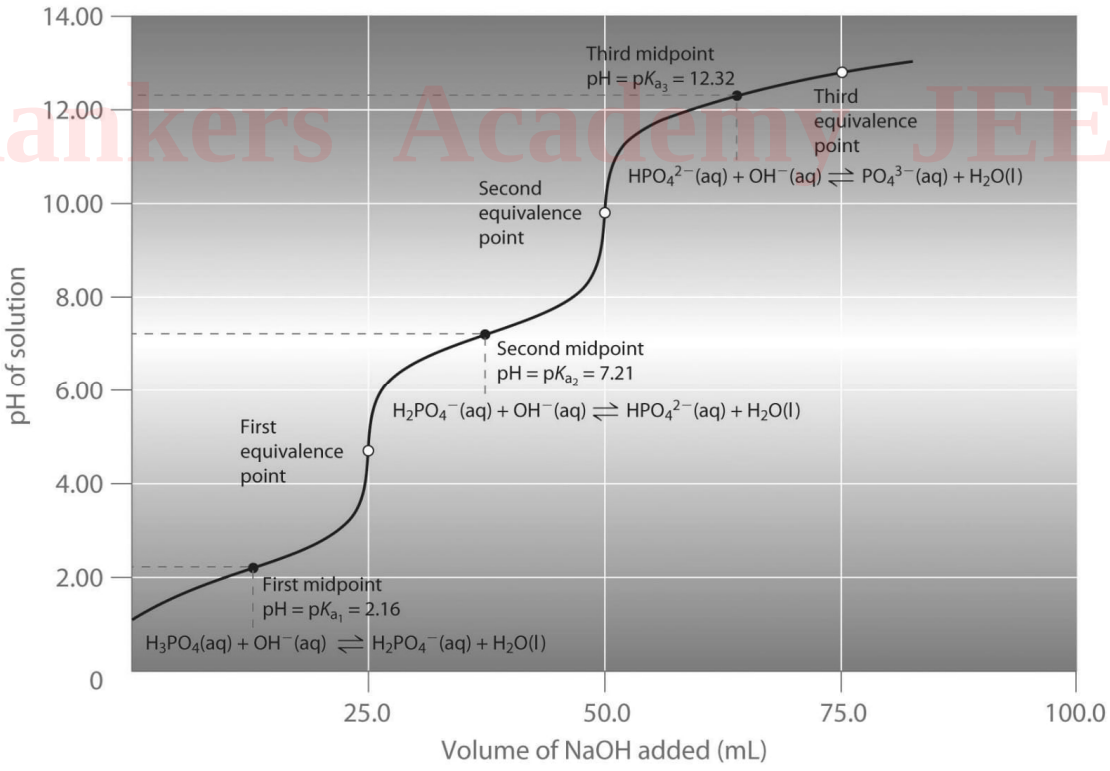

x = number of electrons that occupy d-atomic orbitals

y = number of electrons that occupy p_z - atomic orbitals

z = number of electrons that have spin up $\left(m_s=+\frac{1}{2}\right)$

Calculate the numerical value of $(w+x)-(y+z)$

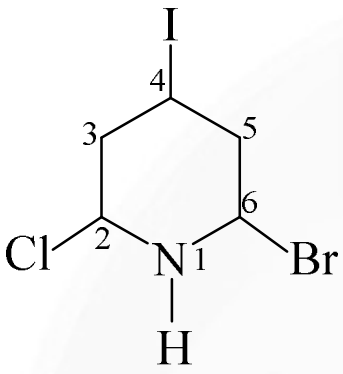

38. 25 ml of $0.1M H_3PO_4$ is being titrated against 0.1 M NaOH solution. Calculate the pH of the titrant at the second equivalence point at $25^{\circ}C$.

39. C_6H_{10} can exist as a maximum of x different alkynes of which a maximum of y alkynes can show positive Tollens' test. Report the value of y/x.

40.

$\xrightarrow[\text{(ii) HCHO}]{\text{(i) Mg (1 equivalent) in ether}}$

In the above sequence of reactions, if Mg preferably attaches to atom number – 'p' of the reactant in the first step and the carbon of formaldehyde preferably attaches to atom number – 'q' of the reactant in the second step, report the value of p^q (p raised to the power of q)

Note:

1. The above numbering done on the reactant molecule is only to mark the atoms uniquely and need not adhere to the IUPAC numbering rule
2. p and q need not necessarily be different numbers

41. Just like C_4H_{10} can exist as 2 structural isomers, n-butane and isobutane, P_4H_6 can also exist as n-tetraphosphane and isotetraphosphane. You are given 1 molecule each of n-butane, isobutane, n-tetraphosphane and isotetraphosphane. What is the total count of atoms in a **-2** (minus two) oxidation state in them.

42. The sum of atomic numbers of all the d & f-block elements whose chemical symbol is a single capital letter of the English alphabet is _____

43. DEADCAT (DiEthylAzoDiCArboxylaTe) molecule is capable of showing geometrical isomerism and contains a total of 22 atoms. It is synthesized in the lab by the following 2 step procedure (incomplete and unbalanced).

Step-1: $H_2N-NH_2 + \underset{}{\overset{O}{\overset{\|}{C}}}(-O-)(-Cl) \longrightarrow$ Compound (X)

Step-2: $X + HOCl \longrightarrow DEADCAT + H_2O$

If compound (X) contains 24 atoms, how many moles of HCl is produced during the synthesis of 1 mole of DEADCAT.

44. What is the count of chiral structures of C_6H_{14} possible having molar mass 90 grams made by substituting exactly two of its C-12 by C-14 isotopes. (don't count enantiomers/ diastereomers separately)

SECTION – II
(ONE OR MORE CORRECT ANSWER TYPE)

This section contains **SIX (06)** questions.
- Each question has **FOUR** options (A), (B), (C) and (D). **ONE OR MORE THAN ONE** of these four option(s) is(are) correct answer(s).
- For each question, choose the option(s) corresponding to (all) the correct answer(s).
- Answer to each question will be evaluated according to the following marking scheme :

Full Marks :+4 **ONLY** if (all) the correct option(s) is(are) chosen;
Partial Marks: +3 If all the four options are correct but **ONLY** three options are chosen;
Partial Marks: +2 If three or more options are correct but **ONLY** two options are chosen, both of which are correct ;
Partial Marks: +1 If two or more options are correct but **ONLY** two options are chosen, and it is a correct option ;
Zero Marks : 0 If none of the options is chosen (i.e. the question is unanswered);
Negative Marks : –2 In all other cases.

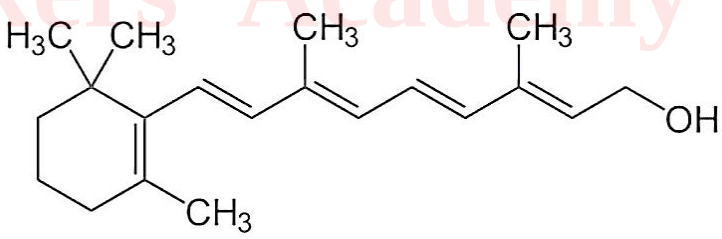

45. Which halogen-halogen single bond is stronger than F-F?

A) $Cl-Cl$ B) $I-Cl$ C) $Br-Br$ D) $I-I$

46. Select the correct statement(s) regarding Fe_3O_4

A) it is found in nature as a yellow coloured mineral called limonite.
B) it is the solid by-product obtained during the Lane's process used for large scale production of hydrogen gas.
C) the octahedral voids present in its structure contain both Fe^{+2} and Fe^{+3} ions
D) it is ferromagnetic and gets very strongly attracted by the magnetic field.

47. Identify the true statement(s) pertaining to the molecule whose structure is shown below

A) all double bonds in its longest straight carbon chain have E-configuration
B) it consists of 4 isoprene units linked together in a head to tail fashion
C) it is highly soluble in water
D) it's deficiency in humans impairs their vision in dimly lit places like movie theatres

48. *4-Hydroxy-3-methoxybenzaldehyde* is the IUPAC name of Vanillin - the aromatic compound found in Vanilla beans. Select the correct statement(s)

A) decreasing order of - I effect of functional groups in Vanillin is

$-CHO > -OCH_3 > -OH$

B) if $-OH$ functional group were present at ortho position to aldehyde (instead of para); the acidity of the new molecule will higher than Vanillin

C) if $-CHO$ functional group were replaced with $-COOH$; the acidity of the new molecule will be higher than Vanillin

D) if $-OH$ functional group were present at meta position to aldehyde (instead of para); the acidity of the new molecule will be lower than Vanillin

49. Identify the correct comparison(s) regarding viscosity

A) *n*-octane at $25^\circ C >$ *n*-octane at $75^\circ C$

B) *n*-octane at $25^\circ C >$ *iso*-octane at $25^\circ C$

C) *n*-octane at $75^\circ C >$ *n*-octanol at $25^\circ C$

D) Propane - 1, 2, 3-triol at $25^\circ C >$ Ethanol at $25^\circ C$

50. Some $PH_3(g)$ is introduced into a flask at $600^\circ C$ containing an inert gas. PH_3 proceeds to decompose into $P_4(g)$ & $H_2(g)$ and the decomposition goes to completion. The total pressure as a function of time is summarized in the chart below:

Time (s)	0	60	120	∞
$P_{total}(mm\,Hg)$	262.40	272.90	275.51	276.40

Identify the correct option(s):

A) the total pressure at $t = 0$ is due to inert gas

B) the total pressure at $t = 60s$ includes but is not limited to inert gas

C) the total pressure at $t = \infty$ excludes inert gas

D) the rate constant (k) for decomposition of $PH_3(g)$ is $0.0058\ mole\,lit^{-1}s^{-1}$
