**MATHEMATICS** **Max Marks: 60**

## SECTION–I
## (SINGLE CORRECT ANSWER TYPE)

This section contains **FOUR (04)** questions.

- Each question has **FOUR** options (A), (B), (C) and (D). **ONLY ONE** of these four options is the correct answer.
- For each question, choose the option corresponding to the correct answer.
- Answer to each question will be evaluated according to the following marking scheme:

*Full Marks* : +3 If **ONLY** the correct option is chosen;
*Zero Marks* : 0 If none of the options is chosen (i.e. the question is unanswered);
*Negative Marks* : −1 In all other cases

1. A basketball player has a constant probability of 0.4 of making any given shot, independent of previous shots. Let $a_n$ be the ratio of shots made to shots attempted after $n$ shots. The probability that $a_{10}=0.4$ and $a_n \le 0.4$ for all $n$ such that $1 \le n \le 9$ is given to be $p^a q^b r/(s^c)$ where $p,q,r$, and $s$ are primes, and $a,b$, and $c$ are positive integers. Find $(p+q+r+s)(a+b+c)$.

A) 560 B) 660 C) 760 D) 860

2. A chord AB which is bisected at $(1,1)$ is drawn to the hyperbola $7x^2+8xy-y^2-4=0$ with centre C, which intersects its asymptotes in E and F. If the equation of the circumcircle of $\Delta CEF$ is $x^2+y^2-ax-by+c=0$ then the value of $\frac{23(a-b+c)}{12}$ is equal to:

A) 1 B) 2 C) 3 D) 4

3. Let $f(x)$ be a polynomial satisfies the relation $f(f(f(x)))+(1-p)f(x)=3, \forall x \in R$, where $p$ is any real number. If leading coefficient of $f(x)$ is 2, then find the value of $\left(\frac{d}{dx}(f(f(x))) \text{ at } x=p\right)+\int_{-p}^{p}\left(2f^{-1}(x)+1\right)dx$.

A) 2 B) 3 C) 4 D) 6

4. If $f:R \to R$ and $g:R \to R$ are two differentiable functions. $g(x)=\left(\int f(x)dx+x\right)^{10}$ and satisfies $T_4+f(x)T_5={}^{11}C_4 x^{10}; \forall x \in R$, where $T_4$ and $T_5$ are $4^{th}$ and $5^{th}$ term in the binomial expansion of $g(x)$, then the area bounded by $f(x)$ and $g(x)$ is equal to ___ .

A) $\frac{9}{11}$ B) 1 C) $\frac{10}{11}$ D) $\frac{12}{11}$

## SECTION – II
## (ONE OR MORE CORRECT ANSWER TYPE)

This section contains **THERE (03)** questions.

- Each question has **FOUR** options (A), (B), (C) and (D). **ONE OR MORE THAN ONE** of these four option(s) is(are) correct answer(s).
- For each question, choose the option(s) corresponding to (all) the correct answer(s).
- Answer to each question will be evaluated according to the following marking scheme :

*Full Marks* :+4 **ONLY** if (all) the correct option(s) is(are) chosen;
*Partial Marks*: +3 If all the four options are correct but **ONLY** three options are chosen;
*Partial Marks*: +2 If three or more options are correct but **ONLY** two options are chosen, both of which are correct ;
*Partial Marks*: +1 If two or more options are correct but **ONLY** two options are chosen, and it is a correct option ;
*Zero Marks* : 0 If none of the options is chosen (i.e. the question is unanswered);
*Negative Marks* : –2 In all other cases.
**For example, in a question, if (A), (B) and (D) are the ONLY three options corresponding to correct answers, then choosing ONLY (A), (B) and (D) will get +4 marks; choosing ONLY (A) and (B) will get +2 marks; choosing ONLY (A) and (D) will get +2 marks; choosing ONLY (B) and (D) will get +2 marks; choosing ONLY (A) will get +1 mark; choosing ONLY (B) will get +1 mark; choosing ONLY (D) will get +1 mark; choosing no option (i.e. the question is unanswered) will get 0 marks; and choosing any other combination of options will get -2 marks.**

5. A cubic equation with real coefficients $p(x)=0$ has one real root $(\alpha)$ and two imaginary roots $(\beta \pm i\gamma)$ represented by $A, B$ and $C$ on the argand plane respectively. Then

A) roots of $p'(x)=0$ are imaginary if A lies inside one of the two equilateral triangles with base BC

B) roots of $p'(x)=0$ are real if A lies inside one of the two equilateral triangles with base BC

C) roots of $p'(x)=0$ are imaginary if A, B, C are vertices of an isosceles (not equilateral) triangle

D) roots of $p'(x)=0$ are real and equal if $\dfrac{\alpha-\beta}{\gamma}=\pm\sqrt{3}$

6. Let $f(x)=\lim\limits_{n\to\infty}\left(-n^3\right)\left(\left|2\tan^{-1}\left(e^{|x|}-e\right)-\dfrac{1}{n^3}\right|-2\left|\tan^{-1}\left(e^{|x|}-e\right)\right|\right), x\in R$, then which of the following statement(s) is(are) correct ?

A) The number of points where $y=f(x)$ is discontinuous is 1

B) The number of points where $y=|f(x)|$ is discontinuous is 1

C) $f\left(\dfrac{1}{2}\right)+f(3)=0$

D) Number of solution of $f(x)=\operatorname{sgn}(x)$ is infinite. (Where $\operatorname{sgn}(x)$ is the signum function of $x$)

7. Suppose that a cubic function with respect to $x$, $f(x)=ax^3+bx^2+cx+d$ satisfies all of 3 conditions: $f(1)=1, f(-1)=-1, \int_{-1}^{1}(bx^2+cx+d)dx=1$

Let $f(x)$ be such that $I=\int_{-1}^{\frac{1}{2}}\{f''(x)\}^2\,dx$ is minimized then which of the following option(s) is/are true.

A) $a=\frac{-1}{4}$

B) $a=\frac{-3}{4}$

C) Minimum value of I is $\frac{81}{32}$

D) Minimum value of I is $\frac{57}{32}$

## SECTION-III
## (NON-NEGATIVE INTEGER)

- This section contains **SIX (06)** questions.
- The answer to each question is a **NON-NEGATIVE INTEGER**..
- For each question, enter the correct integer corresponding to the answer using the mouse and the on-screen virtual numeric keypad in the place designated to enter the answer.
- Answer to each question will be evaluated according to the following marking scheme:

*Full Marks:* +4If ONLY the correct integer is entered; *Zero Marks : 0 In all other cases.*

8. Let $A=\left\{x\hat{i}+y\hat{j}+z\hat{k}:(x,y,z)\in R^3, x^2+y^2+z^2=1\right\}$,

$B=\left\{x\hat{i}+y\hat{j}+z\hat{k}:(x,y,z)\in R^3, |\sqrt{3}x+2y+3z-16|=14\right\}$.

Let $\vec{a},\vec{b},\vec{c}$ be three distinct vectors in set $A\cap B$ such that $|\vec{a}-\vec{b}|=|\vec{b}-\vec{c}|=|\vec{c}-\vec{a}|$. If V denotes the volume of parallelepiped determined by the vectors $\vec{a},\vec{b},\vec{c}$ then $16\sqrt{3}V$ equals.

9. For each positive integer $n$, let

$$y_n=\left(1+\frac{1}{n^2}\right)\left(1+\frac{4}{n^2}\right)^2\cdots\left(1+\frac{n^2}{n^2}\right)^n$$

For $x\in\mathbb{R}$, let $[x]$ be the greatest integer less than or equal to $x$. If $\lim_{n\to\infty}(y_n)^{\frac{-4}{n^2}}=L$, then the value of $[16L]$ is _____

10. Let $S_n$ denote the sum given by :

$$S_n = \sum_{r=1}^{n-1}\left(\left(\frac{n^2-2r^2+n-3r-1}{(r+1)^2(r!)^2}\right)\prod_{i=0}^{r-1}(n+r-i)(n-i)\right)$$

Then the value of $S_6$ is equal to _____

11. The sum $\sum_{x=2}^{44} 2\sin x \sin 1\left[1+\sec(x-1)\sec(x+1)\right]$ can be written in the form $\sum_{n=1}^{4}(-1)^n\frac{\Phi(\theta_n)}{\Psi(\theta_n)}$, where $\Phi$, $\Psi$ are trigonometric functions and $\theta_1,\theta_2,\theta_3,\theta_4$ are degrees $\in[0,45]$.

Find $\theta_1+\theta_2+\theta_3+\theta_4$.

12. Find the number of functions $f(x)$ from $\{1,2,3,4,5\}$ to $\{1,2,3,4,5\}$ that satisfy $f(f(x))=f(f(f(x)))$ for all $x$ in $\{1,2,3,4,5\}$.

13. The function $f$ defined by $f(x)=\frac{ax+b}{cx+d}$, where $a,b,c$ and $d$ are nonzero real numbers, has the properties $f(19)=19$, $f(97)=97$ and $f(f(x))=x$ for all values except $\frac{-d}{c}$. Find the unique number that is not in the range of $f$.

## SECTION-IV
## (PARAGRAPH QUESTIONS)

- This section contains **TWO (02)** questions stems.
- There are **TWO (02)** questions corresponding to each question stem.
- The answer to each question is a **NUMERICAL VALUE.**
- For each question, enter the correct numerical value of the answer using the mouse and the onscreen virtual numeric keypad in the place designated to enter the answer.
- If the numerical value has more than two decimal places, **truncate/round-off** the value to **TWO** decimal places.
- Answer to each question will be evaluated according to the following marking scheme:
- ***Full Marks: +3*** If ONLY the correct numerical value is entered at the designated place;

18. Near a very long straight wire carrying a constant current, there is a rectangular conducting loop. The long side of the loop is parallel to the wire. If the loop is rotated by an angle of $180^\circ$ around the side farthest from the wire, a charge $q_1$ will pass through it. If, instead of rotating the loop from its initial position, we shift it in such a way that the side nearest to the wire takes the place of the farthest side, a charge $q_2$ will pass through the loop. What charge will pass through the loop if, from the initial position, it is carried away to a very large distance?

A) $q_1 + 2q_2$ B) $\frac{q_1 + q_2}{2}$ C) $\frac{2q_1 + q_2}{3}$ D) $\frac{q_1 + q_2}{3}$

19. A tennis player uses a racket to hit a ball over a net. When the racket strikes the ball the racket frame is set into oscillation. The fundamental mode of oscillation is shown. Transverse waves travel along the length of the racket at a speed of $160\,\text{ms}^{-1}$. Calculate the frequency of oscillation of the frame.

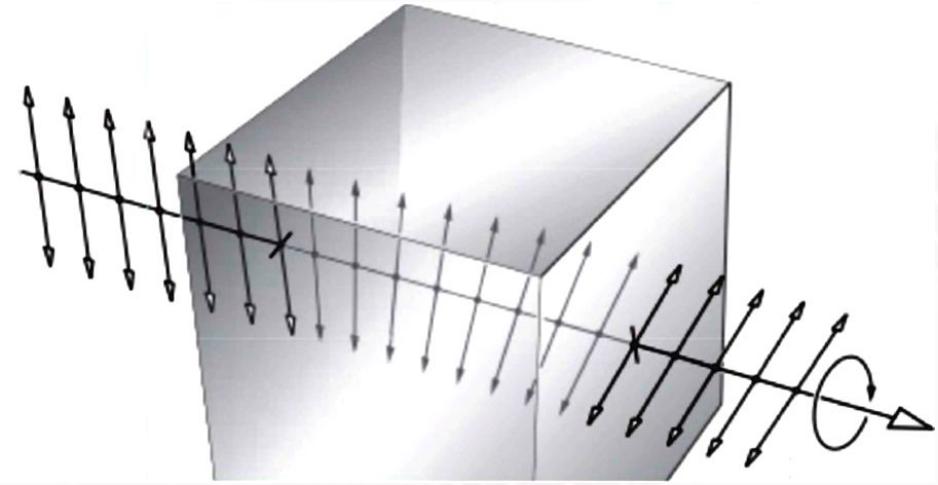

A) 144 Hz B) 355.5 Hz C) 177.7 Hz D) 72 Hz

20. Optical activity is a phenomenon exhibited by a medium where a linearly plane polarized light continuously rotates its plane of polarization as it passes through the medium as shown below.

The plane of electric field can rotate clockwise or counter-clockwise depending on the medium. To distinguish, while looking head-on at light as it reaches the eye after it passes through the medium, if the plane of electric field appears to have revolved clockwise, the substance is referred to as dextrorotatory, or d-rotatory. Alternatively, if it appears to have been displaced counter-clockwise, the material is levorotatory, or $\ell$-rotatory.

Rankers Academy JEE

If the electric fields before and after passing through an unknown medium are $\vec{E}_{\text{before}} = -6\sin(kx+wt)\,\hat{j} + 8\sin(kx+wt)\,\hat{k}$ , $\vec{E}_{\text{after}} = 3\sin(kx+wt)\,\hat{j} + 3\sqrt{3}\sin(kx+wt)\,\hat{k}$ then (take $k$ and was positive constants)

A) the medium is d-rotatory with polarization plane rotation of $83^\circ$ through the medium.

B) the medium is d-rotatory with polarization plane rotation of $67^\circ$ through the medium.

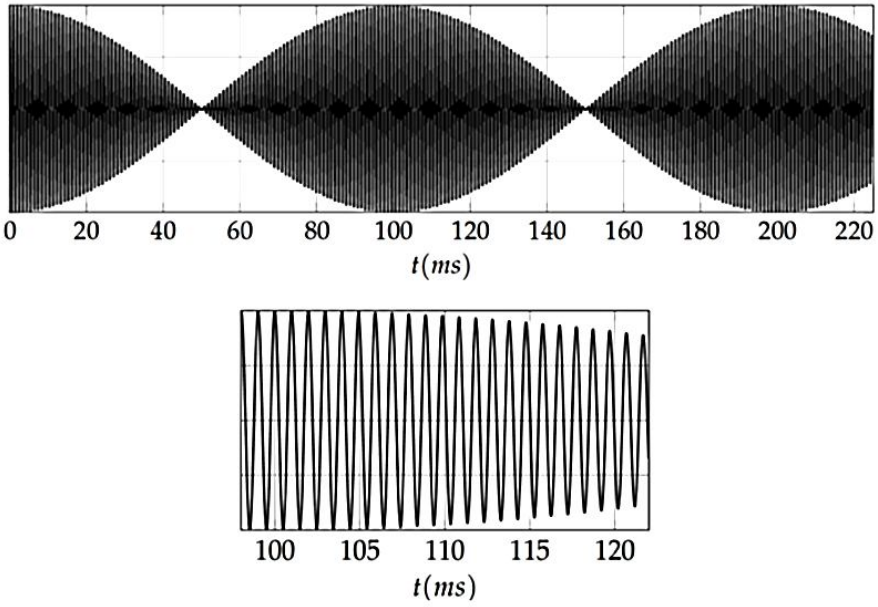

C) the medium is $\ell$-rotatory with polarization plane rotation of $83^\circ$ through the medium.

D) the medium is $\ell$-rotatory with polarization plane rotation of $67^\circ$ through the medium.

21. A microphone records the sound generated by two loudspeakers that emit sinusoidal sound waves of frequencies $f_1$ and $f_2$. Which statement is correct?

A) This is an interference phenomenon and $f_1 = f_2 \approx 20\,\text{Hz}$;

B) This is an interference phenomenon and $f_1 = f_2 \approx 1000\,\text{Hz}$;

C) This is a beat phenomenon and $f_1 \approx f_2 = 20\,\text{Hz}$;

D) This is a beat phenomenon and $f_1 \approx f_2 = 1000\,\text{Hz}$.

## SECTION – II
## (ONE OR MORE CORRECT ANSWER TYPE)

This section contains **THERE (03)** questions.

- Each question has **FOUR** options (A), (B), (C) and (D). **ONE OR MORE THAN ONE** of these four option(s) is(are) correct answer(s).
- For each question, choose the option(s) corresponding to (all) the correct answer(s).
- Answer to each question will be evaluated according to the following marking scheme :

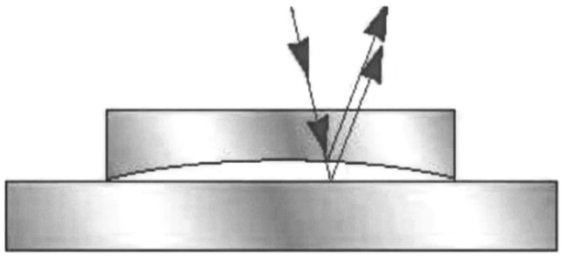

*Full Marks* :+4 **ONLY** if (all) the correct option(s) is(are) chosen;
*Partial Marks*: +3 If all the four options are correct but **ONLY** three options are chosen;
*Partial Marks*: +2 If three or more options are correct but **ONLY** two options are chosen, both of which are correct ;
*Partial Marks*: +1 If two or more options are correct but **ONLY** two options are chosen, and it is a correct option ;
*Zero Marks* : 0 If none of the options is chosen (i.e. the question is unanswered);
*Negative Marks* : –2 In all other cases.
For example, in a question, if (A), (B) and (D) are the ONLY three options corresponding to correct answers, then choosing ONLY (A), (B) and (D) will get +4 marks; choosing ONLY (A) and (B) will get +2 marks; choosing ONLY (A) and (D) will get +2 marks; choosing ONLY (B) and (D) will get +2 marks; choosing ONLY (A) will get +1 mark; choosing ONLY (B) will get +1 mark; choosing ONLY (D) will get +1 mark; choosing no option (i.e. the question is unanswered) will get 0 marks; and choosing any other combination of options will get -2 marks.

22. A plano-concave lens made of a material with a refractive index of 1.50 is placed on a flat glass plate as shown in the figure. The radius of curvature of the curved surface is 8m. The lens is illuminated with yellow light from a sodium lamp whose wavelength is 600 nm, and concentric bright and dark rings are observed. The interference pattern has a dark spot at the center, which is surrounded by 50 dark rings, the largest of which lies at the very edge of the lens.

A) The thickness of air film at the center of the interference pattern is $15\mu m$.

B) The magnitude of focal length of the lens is 16 cm.

C) The radius of largest dark ring is approximately 3.08 cm.

D) The radius of largest dark ring is approximately 1.54 cm.

23. The electrical circuit consists of 10 identical voltmeters. The reading of voltmeter 1 is $U_1 = 12V$.

A) The reading of voltmeter 2 is 6V.

B) The reading of voltmeter 4 is 3V.

C) The reading of voltmeter 6 is 3V.

D) The potential difference between A and B is 11 V.

24. A gas lamp having resistance $R_L$ is connected in a circuit shown in figure-1. Resistance

- $R_L$ varies with voltage as shown in figure-2.

when the applied voltage is zero, the resistance is very high ( $R_L = R_+ \gg R_1$ ) and remains so until the voltage exceeds the value $V_2 = V/2$ ; at this point the resistance drops to $R_- \ll R_1$ and the lamp emits light ;

- the resistance remains very low ( $R_L = R_- \ll R_1$ ) when the voltage across it stays above the value $V_1 = V/4$ ; when the voltage falls below this value, the resistance returns to $R_+$ and the lamp turns off. The graph in figure-2 shows the resistance of the lamp.

28. A ring of radius $\frac{1}{\sqrt{\pi}}$m and of negligible mass is rigidly fixed at C by non-conducting rigid spokes on non-conducting rod of length 5m and mass 2kg. Rod being axis of ring and current of 1A is flowing in the ring as shown in the figure. Rod resting against smooth vertical wall while its other end is on rough horizontal surface. Whole arrangement is placed in uniform vertical magnetic field of 20T. Given AC = 4m, $g = 10 m/s^2$. Minimum value of $\mu$ so that whole system remain in equilibrium is $\frac{2x}{15}$. Find x.

29. A non-conducting ring of radius R having uniformly distributed charge Q starts rotating about x-x' axis passing through diameter with an angular acceleration $\alpha$ as shown in the figure. Another small conducting ring having radius a (a << R) is kept fixed at the centre of bigger ring in such a way that axis xx' is passing through its centre and perpendicular to its plane. If the resistance of small ring is $r = 1\Omega$, find the induced current in it in ampere.

(Given $q = \frac{16\times10^2}{\mu_0}C, R = 1m, a = 0.1m, \alpha = 8 rad/s^2$)

30. The linear scale of a screw gauge can measure minimum value of 0.5 cm, and there are 50 divisions on circular scale. A vernier caliper is designed of same least count as that of the above-mentioned screw gauge. The main scale of vernier caliper is normal scale of 1 mm as minimum measurement. If $n^{th}$ division of vernier scale coincide with $9^{th}$ division of main scale. Find the value of $n$-1.

## SECTION-IV
## (PARAGRAPH QUESTIONS)

- This section contains **TWO (02)** questions stems.
- There are **TWO (02)** questions corresponding to each question stem.
- The answer to each question is a **NUMERICAL VALUE.**
- For each question, enter the correct numerical value of the answer using the mouse and the onscreen virtual numeric keypad in the place designated to enter the answer.
- If the numerical value has more than two decimal places, **truncate/round-off** the value to **TWO** decimal places.
- Answer to each question will be evaluated according to the following marking scheme:
- ***Full Marks: +3*** If ONLY the correct numerical value is entered at the designated place;
- **Zero Marks:0** in all other cases

### PARAGRAPH-I

One of the methods to transfer a planetary body like the rocket, from one planet to another is not sending directly along the radial line. But to let it go in an elliptical orbit [with sun at one of its focus], which joins smoothly to the orbits of the both planets. Let the path of the planetary body starts tangentially to the orbit of one planet at A and joins the orbit of other planet tangentially at B, as shown in the figure.

$SB = r_{max} \Rightarrow$ The maximum distance at point on the orbit of planetary body is called apogee $=$ radius of orbit of second planet.

$e =$ eccentricity of orbit $= \dfrac{r_{max} - r_{min}}{r_{max} + r_{min}}$

$p \Rightarrow$ orbital parameter $= \dfrac{2r_{max}r_{min}}{r_{max} + r_{min}}$

The total energy of the planetary body at any point of path (which is remains conserved) is given by $E = \dfrac{-GM_s m}{2a}$, where $M_s$ mass of sun, $m$ is mass of planetary body.

$a \Rightarrow$ semi-major axis of the elliptical orbit $= \dfrac{r_{max} + r_{min}}{2}$

If the rocket moves on the elliptical orbit of semi-major axis '$a$', its time period of the motion will be directly proportional to $a^{3/2}$.

A planetary body begins its journey in space, it is at perihelion of orbit of first planet at A and finally reaches near the second planet, it is at the aphelion of second orbit at B. So, using conservation of energy.

$E_A = E_B = E$

$$\frac{1}{2}mv_A^2 - \frac{GM_S m}{r_{min}} = \frac{1}{2}mv_B^2 - \frac{GM_S m}{r_{max}} = -\frac{GM_S m}{2a}$$

If $v_1 \& v_2$ are the orbital velocity of first planet and second planet around sun then $v_1 < v_A$ & $v_2 > v_B$ always. Hence once, taken from the gravity of first planet, the planetary body is launched in the direction of orbital motion of first planet, the planetary body needs a small impulse to get a speed about $(v_A - v_1)$ relative to the first planet. Again in order to tangential approach to second planet, the planetary body requires a final impulse which should increase its speed $v_B$ i.e., to get a speed relative to the second planet about $(v_2 - v_B)$. Once it catches up with the second planet, it would land on it, guided by the gravity of second planet. A hypothetical rocket is transferred from first to second for which following data is given.

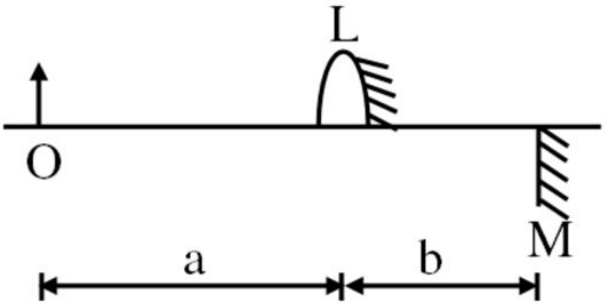

$$r_{min} = 2c \text{ unit}, r_{max} = 16c \text{ unit}, \sqrt{\frac{GM_s}{c}} = 30\sqrt{2} \text{ km/hr}$$

31. The speed (in km/hr) of the rocket after first impulse $(v_A)$ at planet A is :-

32. If the time period of the revolution of planet A about sun is $\frac{2\sqrt{2}}{3}$ years then the time (in years) required to transfer the rocket from planet A to planet B is :-

**PARAGRAPH-II**

In figure L is half part of an equiconvex glass lens ($\mu = 1.5$) whose surfaces have radii of curvature r = 40cm each and its right surface is silvered. Normal to its principal axis a plane mirror M is placed on right side of the lens. Distance between lens L and mirror M is b. A small object O is placed on left of the lens such that there is no parallax between final images formed by the lens and mirror. If transverse length of image formed by L is twice the length of image formed by M.

33. Find the value of a in cm.
34. Find the value of b in cm.

**CHEMISTRY** **Max Marks: 60**

## SECTION–I
## (SINGLE CORRECT ANSWER TYPE)

This section contains **FOUR (04)** questions.

- Each question has **FOUR** options (A), (B), (C) and (D). **ONLY ONE** of these four options is the correct answer.
- For each question, choose the option corresponding to the correct answer.
- Answer to each question will be evaluated according to the following marking scheme:

*Full Marks* : +3 If **ONLY** the correct option is chosen;
*Zero Marks* : 0 If none of the options is chosen (i.e. the question is unanswered);
*Negative Marks* : −1 In all other cases

35. Some of the successive ionization energies of F, Ne, Na and Mg atoms are listed in the chart below

| Element | Successive ionisation energies (kJ/mole) | | |
|---|---|---|---|
| | $I_1$ | $I_2$ | $I_3$ |
| F | ***w*** | 3374 | 6050 |
| Ne | 2081 | ***x*** | 6122 |
| Na | ***y*** | 4562 | 6910 |
| Mg | 738 | 1451 | ***z*** |

The correct increasing order of magnitude of ionization energies hidden by letters ***w, x, y*** and ***z*** will be

A) *w, x, y, z* B) *y, w, x, z*

C) *y, x, w, z* D) *z, x, w, y*

36. An aqueous solution of ammonia has molarity equal to 2M. If density of the solution is 1.534 g/ml, identify the option in which the correct concentration is not mentioned.

A) molality $= \frac{4}{3}$m B) % (w/w) $= \frac{34}{15.34}$

C) % (w/V) = 6.8 D) mole fraction of $NH_3 = \frac{3}{128}$

37. Under identical conditions of temperature and pressure the rate of effusion of $H_2$ into vacuum is $3\sqrt{3}$ times faster than of a gaseous hydrocarbon. Which of the following cannot be the identity of the hydrocarbon.

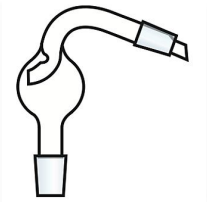

A) alkyne B) alkadiene C) bicycloalkane D) spiroalkane

Sri Chaitanya Educational Institutions Infinity Learn

38. Connection joints made of ground glass are often fixed to inlet and/or outlet of laboratory equipments to minimize the use of corks.

Identify the connector shown above

A) three neck joint B) distillation head

C) Kjeldahl's trap D) mercury pocket

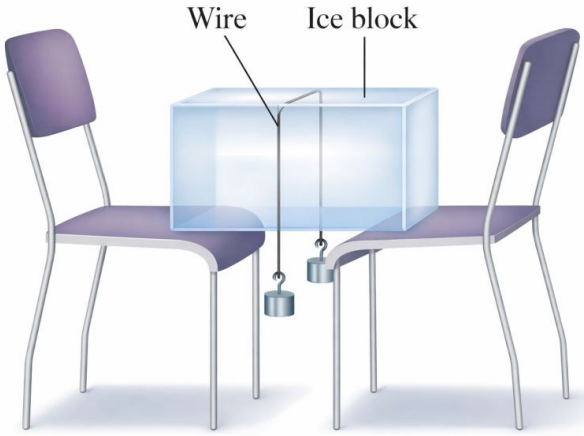

## SECTION – II
## (ONE OR MORE CORRECT ANSWER TYPE)

This section contains **THERE (03)** questions.

- Each question has **FOUR** options (A), (B), (C) and (D). **ONE OR MORE THAN ONE** of these four option(s) is(are) correct answer(s).
- For each question, choose the option(s) corresponding to (all) the correct answer(s).
- Answer to each question will be evaluated according to the following marking scheme :

*Full Marks* :+4 **ONLY** if (all) the correct option(s) is(are) chosen;
*Partial Marks*: +3 If all the four options are correct but **ONLY** three options are chosen;
*Partial Marks*: +2 If three or more options are correct but **ONLY** two options are chosen, both of which are correct ;
*Partial Marks*: +1 If two or more options are correct but **ONLY** two options are chosen, and it is a correct option ;
*Zero Marks* : 0 If none of the options is chosen (i.e. the question is unanswered);
*Negative Marks* : –2 In all other cases.
**For example, in a question, if (A), (B) and (D) are the ONLY three options corresponding to correct answers, then choosing ONLY (A), (B) and (D) will get +4 marks; choosing ONLY (A) and (B) will get +2 marks; choosing ONLY (A) and (D) will get +2 marks; choosing ONLY (B) and (D) will get +2 marks; choosing ONLY (A) will get +1 mark; choosing ONLY (B) will get +1 mark; choosing ONLY (D) will get +1 mark; choosing no option (i.e. the question is unanswered) will get 0 marks; and choosing any other combination of options will get -2 marks.**

39. To explain regelation of ice using the Le Chatelier's principle an instructor had a block of ice suspended between two identical chairs made of non-conducting material. She then hung a wire over the block of ice, with weight attached to either end of the wire as shown below

If the temperature of the surrounding air is $0^{\circ}C$, identify the true statement(s)

A) with time the wire will slowly pass through the ice block, split the ice block into two pieces and will ultimately fall on the floor

B) with time the wire will slowly pass through the ice block and will ultimately fall on the floor; however the ice block will remain intact as a single piece

C) if the portion of the wire resting on the horizontal surface of ice is coated with common salt, the movement of wire through the ice block will become faster

D) if the entire experimental set up were placed in a vacuum, any movement of wire will be slower in comparison to when there is air around

40. Insulin is a protein hormone that controls the level of glucose in human blood. The detailed structure of insulin consisting of distinct **A chain** and **B chain** is shown below.

Identify the incorrect statement(s) regarding insulin

A) it contains a total of 50 peptide bonds

B) of the 3 disulphide bonds present in its structure 2 are intrachain and 1 is interchain

C) there is an equal number of optically inactive amino acid residues present in the A chain and the B chain.

D) all the 20 standard amino acids contribute to the structure of human insulin

41. Look at the following comparison chart for two compounds - **X** and **Y** showing both similarities and differences.

| | Compound X | Compound Y |
|---|---|---|
| 1 | white crystals | white crystals |
| 2 | soluble in water | soluble in water |
| 3 | deliquescent | efflorescent |
| 4 | melts at 591 K | loses mass on heating |
| 5 | used for mercerising cotton | used for softening hard water |

Identify the correct statement(s)

A) **X** can be prepared by Solvay process

B) **Y** can be prepared in Castner Kellner cell

C) **X** is a reactant in Oakwood decarboxylation reaction

D) **Y** (anhydrous) is a product in Oakwood decarboxylation reaction

## SECTION-III
## (NON-NEGATIVE INTEGER)

- This section contains **SIX (06)** questions.
- The answer to each question is a **NON-NEGATIVE INTEGER**..
- For each question, enter the correct integer corresponding to the answer using the mouse and the on-screen virtual numeric keypad in the place designated to enter the answer.
- Answer to each question will be evaluated according to the following marking scheme:

*Full Marks:* +4If ONLY the correct integer is entered; *Zero Marks : 0 In all other cases.*

42. A constant current of 40 microampere is passed through sufficiently concentrated aqueous solution of $AgNO_3$ for 193 minutes using platinum electrodes. During the process, 60% of the cathode area which was dipped in the electrolyte was electroplated by a single atom thick silver layer. If one silver atom occupies $1.5625 \times 10^{-16} cm^2$ of surface area, calculate the surface area of the cathode in $cm^2$ that remains unplated.

Take $N_A = 6 \times 10^{23}$

43. The following two chemical reactions are taking place inside a container

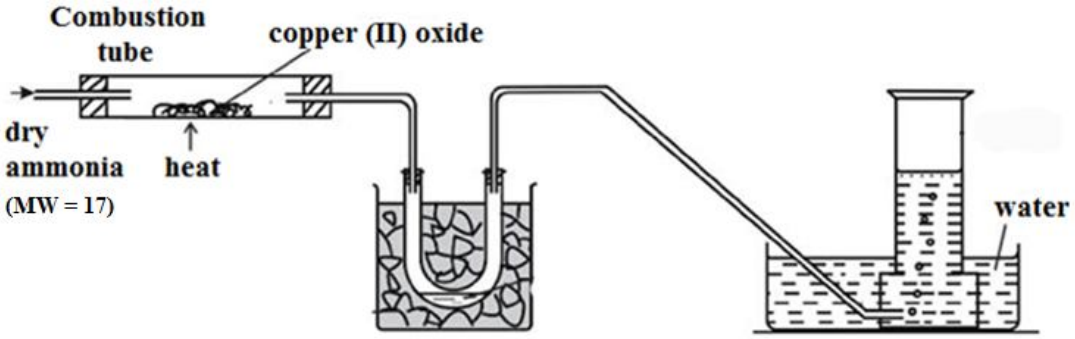

$A + 2B \longrightarrow 3C$ $\quad \Delta H = -400\,kJ$ / mole of A

$2D + E \longrightarrow 2F$ $\quad \Delta H = +300\,kJ$ / mole of E

If the temperature stays constant during the reaction and the rate of disappearance of B is $10^{-3} M$ / sec, the rate of appearance of F will be _____ $\times 10^{-3} M$ / min.

### PARAGRAPH-I

Jaskirat Singh Rangi, operating undercover under the alias Hamza Ali Mazari, carries a sealed vial containing a spherical droplet of dimethyl mercury which is a lethal neurotoxin. Before confronting his nemesis Dawood, he secretly placed the droplet on the outer surface of a chemically inert bandage wrapped around his palm. During their handshake, the droplet transfers completely onto Dawood's hand and instantly spreads into a circular film of radius 4 cm. The spherical droplet inside the sealed vial has a radius of 0.3 cm and density of dimethyl mercury is $\frac{100}{9\pi}$ g/cm$^3$.
