Regular Analysis Through Continuous Exercise

Polymers : RACE-01

Introduction to Polymers; Classifications of Polymers (Source, Structure, Monomer)

1. Molecular mass of the polymer (Mp) is equal to

(A) $M_n \times n$ (B) M_n / n (C) $M_n + n$ (D) $M_n - n$

CPL137

Classification of Polymers (Molecular Forces, Degradations)

2. Which of the following is example of semisynthetic polymer?

(A) Rubber (B) Cellulose acetate (C) Nylon 66 (D) Buna-S

CPL138

3. Which of the following polymers chains are held together by the weakest intermolecular forces ?

(A) Neoprene (B) Nylon-6 (C) Nylon-66 (D) Teflon

CPL139

Addition Polymerisation; Condensation Polymerisation

4. _____ is a man-made polymer.

(A) Rayon (B) Resin (C) Rubber (D) Polythene

CPL140

Rankers Academy JEE

5. Low density polythene is an example of

(A) Cross linked polymer (B) Linear polymer

(C) Branch chain polymer (D) Natural polymer

CPL141

6. Which of the following is an example of co-polymer?

(A) Teflon (B) PVC (C) Buna-S (D) Cellulose

CPL142

7. Which of the following polymers chains are held together by hydrogen bonds or dipole-dipole attraction?

(A) Neoprene (B) PMMA

(C) Nylon-66 (D) Teflon

CPL143

8. Which of the following is an example of Biodegradable polymers ?

(A) Neoprene (B) PMMA

(C) PHBV (D) Polystyrene

CPL144

9. Nylon is an example of :

(A) Polythene (B) Polyester

(C) Polysaccharide (D) Polyamide

CPL146

10. Terylene is prepared from
(A) Ethylene glycol and adipic acid
(B) Ethylene glycol and terephthalic acid
(C) Hexamethylene diamine and adipic acid
(D) Hexamethylene diamine and terephthalic acid

CPL147

11. Polyamides (Nylons) are generally prepared from the monomer of :
(A) Mono alcohol and monocarboxylic acid (B) Diamines and monocarboxylic acid
(C) Monoamines and dicarboxylic acid (D) Diamines and dicarboxylic acid

CPL148

12. Natural rubber has :-
(A) All cis- configuration (B) All trans- configuration
(C) Alternate cis- and trans- configuration (D) Random cis- and trans- configuration

CPL149

13. The common monomer involved in the preparation of both Buna-S and Buna-N is
(A) Styrene (B) Acrylonitrile (C) Ethylene (D) Buta 1,3-diene

CPL150

Uses of Polymer

14. Polystyrene is used to manufacture:
(A) Television cabinet (B) Pumps
(C) Pipes (D) Hand bags

Rankers Academy JEE

CPL151

15. Which polymer is used to make combs, electrical switches, handles of utensils and computer discs ?
(A) Urea-formaldehyde resin (B) Bakelite
(C) Propylene (D) Nylon-6

CPL152

ANSWER KEY

Question	1	2	3	4	5	6	7	8	9	10
Answer	A	B	A	D	C	C	C	C	D	B
Question	11	12	13	14	15					
Answer	D	A	D	A	B
